

BOARD FINDER

FEATURES

RSR + LITE gives your board a fighting chance against impacts from rails, concrete, boxes whatever the case may be. A layer of super tough ceramic P-tex alongside the length of both edges.

RSR + is like nine lives for your board. The ceramic p-tex runs the length of each edge while a second flush edge gives you skate like stability with both providing the ultimate defense against the impact of modern shredding.

D4 SANDWICH (Construction) provides split second response and a consistently poppy flex thanks to four layers of glass.

S-POONTECH makes the board feel shorter and buttery when flat based but when put on edge gives you the edge hold of the entire effective edge.

INTER CARBON STRIPS run from the inserts to the tip and tail and give you extra pop and acceleration out of turns.

INTER CARBON SPBS are carbon rods that run from the rear inserts to the tail letting you pre-load your tail for stupid amounts of pop and acceleration out of turns.
