Product Introduction

Corega WLBARGMO is a MISO wireless broadband Router with IEEE802.11g wireless access point standard. Its MIMO XR technique can improve transmit speed and coverage area. The maximum transmit length is up to 450m and the coverage area can be six times more than general 802.11g products. It also has 3 antennas which can improve transmit quality. Moreover, WL-BARGMO supports security settings, such as WEP, WPA/WPA2-PSK, and 802.1x. WDS and WMM functions are also supported. With extensive functions and superior efficiency, WLBARGMO is the best choice for users seeking for a high quality and broad coverage area wireless broadband Router.

1.1 Package Contents

Check the listed contents thoroughly before installation. In case of discrepancy to the list below, check with your local dealers.

- MISO Wireless Broadband Router
- Power Adapter
- Detachable Antenna
- Flat UTP Cable
- Product Stand (with Mounting Screws)
- Wall Mount Kit
- User Manual
- Quick Installation Guide

1.2 Features

- IEEE802.11b/g standard
- Intended MIMO XR technology can improve wireless coverage up to 450m, coverage radius is six times than general 802.11g products.(Environmental factors may adversely affect wireless signal range.)
- Detachable Antenna Design 3 antennas, support TX-Burst technology. Can effectivly improve transmit speed when working with corega WLCBGMO or corega WLUSB2GO.
- •Supports WEP 64/128bit, WPA/WPA2-PSK, WPA/WPA2-EAP security setting.
- Internal NAT and NAPT fuction, allowing several computers access Internet, compatible on-line gaming, and IM software at the same time.
- Supports WMM mode, improves transmittal quailty of multimedia software.
- Supports WDS P to MP(P to MP bridge mode)and AP Repeater (repeater mode)
- Advanced SPI, DoS Firewall
- Chinese and English version utility
- Supports UPnP and on-line broadband applications (Such as Windows Messenger, MSN Messenger, Yahoo Mesenger, Skype, ICQ and etc.)

1.3 Hardware Introduction

1. Reset Button Press this button it will reset to default setting

2.WLAN LED (Green) ON:Connected

3. Power LED (Green) Indicate power status

4.Status LED (Orange) Blink:Working normal ON:Firmware upgrade

5.WAN LED (Green) ON:Connected Blink:Transmitting or receiving data

6. Speed LED (Green) ON:100Mbps Off:10Mbps 7. Link LED (Green) ON:Connected Blink:Transmitting or receiving data

8. Detachable Antenna Connector

9.WAN port Connected with modem

10. LAN ports(1-4) Connected with PC

11. AC IN Socket Connect with power adapter

Product Installation

2.1 Hardware Installation

Following the steps below to set up WLBARGMO and the connection.

- (1) Insert the cable connector into the Network Adapter embedde in PC, and insert the other side into one of LAN ports (1~4) of the Router.
- (2) Insert the connect into the WAN port of the Router and insert the other side into the modem.
- (3) Connect the Power Adapter, and plug in the AC power.

2.2 Installation Procedure

To ensure successful installation, following the below steps after confirming all installation data and/or equipment.

Install the hardware -> PC setting -> Open the browser (such as IE 6.0), and type [192.168.1.1] in the browser's address bar, and press enter. -> User name: root, leave Password empty, and press Submit.->Select [Quick Installation Setting] for quick installation->Setting the Wireless Security->Use PC with compatible wireless card for wireless connection. **PC Setting**

3.1 TCP/IP Configuration

The following steps and screenshots maybe dissimilar in different operating systems. This manual takes Windows Vista/XP/2000, 95/98/ME, and Mac O/S as examples:

3.1.1 Windows Vista

1. Click[Start] > select [Control Panel]

 Double click [Network and Sharing Center]=>Click [View Status] under [Local Area Network].

3. Click [Properties] ·

Lonnection	
Prv+ Connectivity:	unternet
ave connectivity:	Lindez

- (5) Go to [Network] and press [OK] to close the page.
- (6) The [Restart the windows] screen will pop-up, press [OK] to restart the PC. If the PC is not shown this message, restart the PC manually.

3.1.5 Mac OS 8.x~9.x O/S

- (1) Open the [TCP/IP] configuration from [Control Panel].
- (2) Select [Ethernet Network] in the [connection methods]; select [DHCP server] in [Configuration], and close this page.

3.1.6 Mac OS X O/S

- (1) Go [System Configuration] in Macintosh category.
- (2) Open [Network] configuration in [System Configuration]. If there is no [Network] configuration, select [Display all].
- (3) Select [Built-in Ethernet] in [Display] from [Network] window. Select [Use DHCP] in [Setting] from [TCP/IP].
- (4) Press [Apply].

3.2 Browser Configuration

The following examples are for Windows Vista/XP, skip this chapter if you are using Windows 2000/98/ME.

3.2.1 Windows Vista

1. Open Internet Explorer, click [Tools]=>select[Internet Options] ·

*Note:When the dial up connection page appears, please close it, do not

connect to Internet.

 Select the [Connections] tab=>click [Never dial up a connection]=>click [LAN settings].

 Uncheck the three boxes on the Local Area Network Setting page=>click[OK].

4.1 Quick Network Configuration

4

Basic configuration is required before connection your computer to the internet via WLBARGMO. The connection methods may be differed by your contract to the ISP. Please reconfirm your connection conditions with your ISP prior to configure this router. The configuration procedures are as follow:

- *Note: Anti-virus or Firewall software may prevent this router from being set-up properly. Please close such software through out the setting of WLBARGMO.
- (1) Open the Web browser (Internet Explorer 6.0). If you use dial-up network such as PPPoE, and are using Windows 2000/98/ME O/S. The [Dial-up Network] window will pop-up; do not connect to the Internet right now, and close the window.
- (2) Type [192.168.1.1] in the browser's address bar, press [Enter].

- *Note: [192.168.1.1] is the IP address for configuring CG-WALBARGMO, and is not corega's company public internet address. After you have completed the configuration, connect to [http://www.corega-asia.com] for testing the connection.
- (3) When log-in screen is appeared, type [root] for the username, and leave empty for the password. Press [Submit].

Username :	root
Password :	
_	

(4) Please select the language.e.g.) English.->Select your region.e.g.) Singapore.=>Click [Apply].

Prepare for testing Please wait 0 seconds PPPOE Connection OK IP address : 10.15.1.72 Subnet mask : 255.255.255.0 Default gateway : 10.15.1.254 DNS server1 : 10.15.1.2	
	Refresh Close

- (5) Open the web browser (IE 6.0), and test with any website for testing the connection.
 - *Note: If the connection to the website fails. Please make sure the data you entered are correct, or any mistake occured in the process of the installation, such as the LAN/WAN connections. After verifying that, repeat these setps in the section.

4.2 Establishing the Wireless Internet Connection

So far, you should be able to connect to the Internet wirelessly. However, please be reminded that your network is not safe and the connection is open to anyone. Please consult [Chapter 5 Wireless Security Configuration] for security setting. Wireless connection is illustrated as following.

4.2.1 Adjust the Antennas

In order to keep WLBARGMO in the best status, please refer to the following figure. Please confirm that the antennas are adjusted as the figure bellow:

4.2.2 Setup Wireless Adapter

Hereunder is the setting on Centrino Notebook as an example, for wireless adapters in other brands, please refers to the original manuals.

<Windows XP (SP1) O/S>

(1) Go [Control Panel] -> double click on [Network connection] -> right click on [Wireless Network Connection] -> select [properties] -> click on [Wireless Network] tab -> select [Use Windows to configure my wireless networks setting], and press [OK].

eneral	Wireless Networks	Advanced		
Use Avail	Windows to configur able networks:	e my wireles:	s networ	k settings
i	corega	STIEWOIK, CI		Configure

(2) Go [Control Panel] -> [Network connection] again -> right click [Wireless network connection], select [Available wireless network connection], e.g.) corega, and click [Connect].

(3) Connection status will appear in the bottom right of the screen.

*Note:The wireless connection has been established now. Please go to corega's website at http://www.corega-asia.com to check the connection to the Internet. To prevent from unlawful access to your network, you are recommended to perform wireless security setting. Type [192.168.1.1] in the browser's address bar, press [Enter]. Enter the function menu, ad click on [802.11g/b Security setting] item. And select WEP or WPA setting.

5.1 WEP Setting

In order to prevent your information from being hacked, it is recommended to use WEP encryption when using wireless connection.

Authentication	1 WEP		
Cipher Type	2 WER -		
Encryption	3 64 bit 💌	b.	
Auto generate WEP	a.	Generate Key	Clear
WEP KEY	16 decimals(0- S/ a-f)		
KEYI @	C.		
KEY2 (
KEY3 O			
KEY4 O			
WPA shared key	ASOE key (8-63 charac	tera) 🔿 16 desimala(64 charactera	5
DTIM	5 3 (1 - 5)		
Radius Server			

- (1) Select [WEP] from Authentication menu.
- (2) Select [WEP] from Cipher menu
- (3) Select [64-bit] or [128-bit] from the Encryption menu.
- (4) Type encryption code in [Key1].

*64 bit: hex (0~9, a~f), 10 digits in total.

*128 bit: hex (0~9, a~f), 26 digits in total.

Or you can click [Generate Key] to obtain a password automatically:

- a. Enter any character in the column of [Auto generate WEP].
- b. Click [Generate Key].
- c. Passwords will be generated automatically in the columns of Key1 ~ Key4.
- *P.S. Every kind of network adapter might have different encryption ways, so [Generate Key] isn't recommended. Check before selection.
- (5) Recommended to keep default value of [DTIM].
- (6) Save your settings by [Save].

5.2 WPA Setting

WPA is encrypted by a periodic update, making it more difficult to be hacked. Home users and company users are recommended to use <WPA-PSK> and <WPA-EAP> respectively.

<WPA-PSK>

- (1) Select [WPA-PSK] or [WPA/WPA2-PSK](Recommended) in the column of [Authentication] .
 - a. [WPA2-PSK]: The 2nd generation encryption technology performs stricter protection than ever. Before selection, please check the function availability of your network adapter, or select b.
 - b. [WPA/WPA2-PSK]: If selected, encryption type will be defined automatically according to the corresponding wireless network adapter.
- (2) Select [Cipher Type]. (Recommended to keep the default.)
- (3) After selecting [WPA shared key], key in the Pre-Shared-Key in connection with the communication device in the below column. Please enter 8~63 alphabets or numbers.

Authentication	WPAWPA2 - PSK V
Cipher Type	Auto (AES / TKIP)
Encryption	64 bit 🛩
Auto generate WEP	Generate Key Clear
KEY1 © KEY2 O KEY3 O KEY4 O WPA shared key	© ASCII key (8-63 characters) © 16 decimals(64 characters)
DTIM Radius Server	3 (1 - 6) Rođus Se ver Setup

*Note: The wireless network adapter is required to have the same setting; otherwise, the connection will fail.

- (4) Recommended to keep default value of [DTIM].
- (5) Press [Save] to save setting.

<WPA-EAP>

- (1) Select [WPA2-EAP] or [WPA/WPA2-EAP](Recommended). in the column of [Authentication]
 - a. [WPA2-EAP]: The 2nd generation encryption skill performs stricter protection than before. Before selection, please check the function availability of your network adapter, or select b.
 - b. [WPA/WPA2-EAP]: If selected, encryption type will be defined automatically according to the corresponding wireless network adapter.
- (2) Select [Cipher Type] (Recommended to keep the default).

*Note: The wireless network adapter is required to have the same setting; otherwise, the connection can't succeed.

- (3) Recommended to keep default values of [DTIM].
- (4)You may click [RADIUS Server] for parameter settings, but check with MIS staff before setting.

Authentication	WPA/WPA2 - EAP M
Cipher Type	Auto (AES / TKIP)
Encryption	64 bit 🔍
Auto generate WEP	Generate Key Clear

<Security setting/filter list>

This function can forbid users to access certain website on the Internet:

(1)Enter the forbidden URL or keywords

(2) Then click [save] to complete the configuration. All the forbidden data will be displayed in the table below.

Jrl Address or key word	is :	
	Save Cancel	
	Filter List (Max, 10 records)	

<Advanced setting/virtual server>

Virtual server is an appointed port opened by the PC in connection with the product, allowing other users connecting up via WAN. Open servers or special online games can take advantage of this function. Setting processes are as follows:

- (1) Select a PC to be the virtual server.
- (2) Select Service.
- (3) Enter Port Range of internet connection with the server, and Port Range used by the server software.
- (4) Select Protocol.
- (5) [Remark] column can be filled in with an explanation of the server.
- (6) Click [Submit] after setting. All info will show in the below table.

1	Connecting with a pc.	Please select a PC		*		
2	Service	User Defination 💌				
3	Port Range	-	(1~65	535) 🗖	Advanced Setting	
4	Protocol	TCP 🛩				
5	Remark					
	6 Vir	Submit [Cancel ax, 20 reco	ords)		

<Advanced setting/Special Applications>

Add/ Edit/ Delete the setting of special application in the table. After key-in related information, please click [save] and the setting will be displayed in the list.

	Applications		User Defination		
	Trigger				
	Incoming ports	5			
	Remark				
		Save Special Applicatio	Cancel ns List (Max, 10 records)		
0.0.0	Applications	Trigger	Incoming ports	Remark	Operate

<Advanced setting/DMZ>

If the online game's port range is unknown, or its parameter is different every login, DMZ function is recommended. While this function starts, select the PC, being allowed to connect with, then click [Save].

DMZ Server	~	Please select a PC.
------------	---	---------------------

*Note:

- 1. The PC becomes vulnerable to being hacked if DMZ function starts. Please only use it in need.
- 2. The PC with DMZ function needs a fixed IP address.
- 3. DMZ function can only be used in one PC.

<Avanced setting/Routing Table/Static Routing>

Add/ Edit/ Delete static routing can be set in the table. After key-in of static routing information, click [Save]. The setting log will be displayed afterward.

	Destination		
	Subnet Mask		
i i	Default Gateway		
	Save Static Reuting Lis	Cancel st (Max, & records)	
			A

<Advanced setting/Routing Table/Dynamic Routing(RIP)>

The table allows dynamic routing setting. Select RIP version in the below column (this product supports both RIPv1 and RIPv2), then [Save] to complete the setting.

AN RIP Transferring / Receiving	RIPv1 💙
---------------------------------	---------

<Advanced setting/Routing Table/Routing Table>

All routing logs are displayed in the table.

Advanced Setting / Routing Table / Routing Table

Connecting with a pc.	Subnet Mask	Default Gateway
192.168.1.0	255.255.255.0	192.168.1.1
0.0.0	0.0.0.0	0.0.0
0.0.0	0.0.0.0	0.0.0

<Advanced setting/UPnP >

Activating this function can detect the device or software of LAN, supporting UPnP. For example: online games supporting UPnP or Windows Messenger (Ver. 4.7 or above), MSN Messenger (Ver. 5.0 or above) and so forth. Set its status usable. The default value is [Enable].

	Adva	nced Setting / UPnP	
Use UPnP		Enable	
	Save	Cancel Back	

<Advanced setting/SNMP >

There are two ways of SNMP:Syslog (UDP) and SMTP(TCP) °

- (1) Start SNMP : User can select two ways to start SNMP function. If select [Local], the product will respond from LAN. If select [Remote], the product will respond from WAN.
- (2) Get Community: this box is in response to the setting of "Get" group of [GetRequest].
- (3) Set Community: this box is in response to the setting of "Set" group of [SetRequest].
- (4) WAN assign IP address:Enter the IP access the product from WAN.

FAQ

When the installation fails or the connection doesn't succeed, it's recommended to take the following actions.

- (1) Find your problem in the troubleshooting collection.
- (2) Search on our official website at http://www.corega-asia.com for the latest information of this product.
- (3) Go to our official website at http://www.corega-asia.com->click [Support] ->select the [Online Customer Support] item->fill the form page and note following information. We will contact you as soon as possible.
 - Product name: e.g.) WLBARGMO
 - Firmware version: access the management program to check.
 - Your ISP service name.
 - Windows system: e.g.) Windows98/2000/XP and so on.
 - WEB browser(Version): e.g.) IE5.0/5.5/6.0 and so on.
 - Network adapter manufacturer and its driver version.
 - Connection way: fixed IP, dynamic IP or PPPoE dial-up connection.
 - What is your problem and situation? e.g.) unable to internet.
 - What is the error message or picture?
- Q1.Not able to connect to the Internet.
- Please make sure if the below processes are complete or not.
- (1) Is your subscription to ISP expired?
- (2) Have the powers of all relevant devices been switched on, or have cables or plugs been connected correctly?
- (3) Has the cable line between the modem and internet been connected correctly?
- (4) Have the cable lines among the modem, product and PC been connected correctly?
- => When the product and modem have been connected correctly, WAN LED will light up. If no light, please remove cable line, then re-plug in. If the modem has a MDI/ MDI-X button, please try to switch it.
- =>When the connection between PC and the product is normal, the Link/ Act LED of the front LAN port will light up after the PC's power is turned on.
- (5) Has the connection with ADSL's splitter been linked up correctly (There are two kinds of splitter: 'Telephone' and 'ADSL modem')?
- (6) Does the PC's network adapter function normally?
- => Right click on [My Computer] and select [properties] => [Device manager] =>Display[Network adapter]. If there is a marking of ? or !, it means that the network adapter doesn't perform normally. Please re-install it.
- (7) Is your network setting correct?
- => Check if TCP/IP setting is correct or not (Please refer to [3.1 TCP/IP Configuration to check your setting].

- (8) Has all information provided by your ISP been entered correctly?
- (9) Are the settings of your web browser correct?
- Q2. Can not access the management program
- A: Please confirm the following settings.
- (1)Is the TCP/IP address correct?(Please refer to 3.1)
- (2)Is the cardbus successfully installed? (Right click [my computer] select [properties]->click[device manager], if a [? or !] appears symbol on the network adapter icon, please re-install the product.)
- (3)Make sure the [Proxy server] box is unchecked. (refer to chapter 4)
- Q3. Not able to log in the management program.
- A: You have 4 ways to check and solve the problem:
- (1) Close and re-open the IE browser and login the program again.
- (2) Log out and re-login the Windows OS. Then login the program again.
- (3) Probably the management program is accessed from the other user. Wait until that user exits the program.
- (4) Reset to default settings (Refer to Q9. for more details) and re-login the program.

Q4.Forget the password.

- A: If you ever changed the password of the management program, please enter the one you set. If you forget the password, please reset to default settings. Please refer to Q9 for more details.
- Q5. How to set or change the password of the management program?
- A: Access the management program, and then click [Management]. Enter new password in the columns of [Admin login passowrd], and [password confirmation], then click [Save]. When you re-access the management program, you must enter new username and password (The default username is [root] and no password.).

Q6. Failure in firmware update.

A: If the firmware update fails, please contact us by Online Customer Support webpage. Please go to the website of http://www.corega-asia.com -> click on [Support] and right click the [Online Customer Support] item -> Filling the form -> Click [Submit].

Q7 How to acquire your PC's IP address?

A: If you want to check your PC's IP address via the product, you may refer to the below steps:

<Windows XP/ 2000>

- (1) Click [Start] => [Programs] => [Command prompt].
- (2) Input [ipconfig] => [Enter].
- (3) Confirm IP address (which sould be 192.168.1.x). If the IP is incorrect, please enter 1-byte character as [ipconfig /renew] => Press [Enter].

<Windows Me/ 98/ 95>

- (1) Click [Start] => Click [Run].
- (2) Input [winipcfg] in the column => press [Enter].
- (3) Select your network adapter to display IP address. The IP should be 192.168.1.x ,if none, please click [Release] => Click [Renew].

Q8. How to reboot the product?

- A: Reboot to get new setting values applied. The steps are as follows: open the management program-> Click on [Management]-> Click on [Proceed] in the [Reboot] column.
 - *Note: The definitions of [Reboot], [Firmware update], and [Reset to default settings] are different. Please make sure of your intention before proceeding.

Q9: How to reset to default settings?

- A: If you forget the password, get failed in setting or product hang up; you can reset the product's settings to default values.
- (1) Use a spindle item (e.g. a clip) to press [Reset button] in the front side of the product until [Status] light goes out.
- (2) When the [Status] light starts to flash, the system has reset to its default values.

Appendix

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the folowing two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

IMPORTANT NOTE:

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

IEEE 802.11b or 802.11g operation of this product in the U.S.A. is firmware-limited to channels 1 through 11.

This equipment has been SAR-evaluated for use in laptops (notebooks) with side slot configuration.
