CG-WLBARGO

54M Wireless broadband Router

corega®

User Manual

Contents

Contents

1 Product Introduction

Corega WLBARGO is a 54M wireless broadband Router with IEEE802.11g wireless access point standard. It supports TX-burst technology which can effectively improve the transmit speed. It also contains 5 dBi detachable antenna which can maximum transmit length up to 500m. Moreover, WLBARGO supports security settings such as WEP, WPA and WPA2. WDS and WMM functions are also supported. With extensive functions and superior efficiency, WLBARGO is the best choice for users seeking for a high quality and broad coverage area wireless broadband Router.

1.1 Package Contents

Check the listed contents thoroughly before installation. In case of discrepancy to the list below, check with your local dealers.
- Wireless 54Mbps Broadband Router
- Power Adapter
- Detachable Antenna
- Flat UTP Cable
- Product Stand (with Mounting Screws)
- Wall Mount Kit
- Quick Installation Guide
- User Manual

1.2 Features

- IEEE802.11b/g standard
- Contains 5 dBi detachable antenna which can improve wireless coverage up to 500m.(Environmental factors may adversely affect wireless signal range.)
- Supports TX-Burst technology. Can effectivly improve transmit speed when working with corega WLCBGMO or corega WLUSB2GO.
- Supports WEP 64/128bit, WPA/WPA2 security setting.
- Internal NAT and NAPT fuction, allowing several computers access Internet, compatible on-line gaming, and IM software at the same time.
- Supports WMM mode, improves transmittal quailty of multimedia software.
- Supports WDS - P to MP(P to MP bridge mode)and AP Repeater (repeater mode).
- Advanced SPI, DoS Firewall
- Chinese and English version utility
- Supports UPnP and on-line broadband applications (Such as Windows Messenger, MSN Messenger, Yahoo Mesenger, Skype, ICQ and etc.)

1.3 Hardware Introduction
1. Reset Button
Press this button it will reset to default setting

2. WLAN LED (Green)
ON:Connected

3. Power LED (Green)
Indicate power status

4. Status LED (Orange)
Steady on: Abnormal
Blink:Connected
Flash:Firmware upgrade/Reboot

5. WAN LED (Green)
ON:Connected
Blink:Transmitting or receiving data

6. Speed LED (Green)
ON:100Mbps
Off:10Mbps

7. Link LED (Green)
ON:Connected
Blink:Transmitting or receiving data

8. Detachable Antenna
Connector

9. WAN port
Connected with modem

10. LAN ports(1-4)
Connected with PC

11. AC IN Socket
Connect with power adapter

2.1 Hardware Installation

Following the steps below to set up WLBARGO and the connection.

(1) Insert the cable connector into the Network Adapter embeded in PC, and insert the other side into one of LAN ports (1~4) of the Router.
(2) Insert the connect into the WAN port of the Router and insert the other side into the modem.
(3) Connect the Power Adapter, and plug in the AC power.
2.2 Installation Procedure

To ensure successful installation, following the below steps after confirming all installation data and/or equipment.

Install the hardware -> PC setting -> Open the browser (such as IE 6.0), and type [192.168.1.1] in the browser's address bar, and press enter. -> User name: root, leave Password empty, and press Submit. ->Select [Quick Installation Setting] for quick installation->Setting the Wirless Security->Use PC with compatible wireless card for wireless connection.

3.1 TCP/IP Configuration

The following steps and screenshots maybe dissimilar in different operating systems. This manual takes Windows XP/2000, 95/98/ME, and Mac O/S as examples:

3.1.1 Windows Vista O/S

1. Click[Start] > select [Control Panel]

2. Double click [Network and Sharing Center]=>Click [View Status] under [Local Area Network].
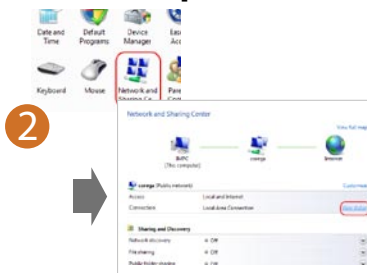

3. Click [Properties]。
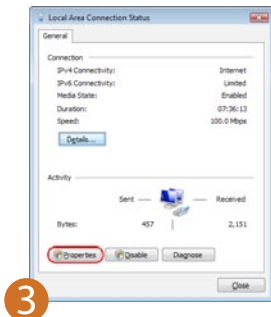

4. Select [Internet Protocol Version 4 (TCP/IPv4)]=>click [Properties]。
5. Select the [General] tab=>click both [Obtain an IP address automatically] and [Obtain DNS Server address automatically]=>click [Advanced].
6. Select the [DNS] tab=>uncheck the [Register this connection's addresses in DNS] box=>click [OK].

7. Close all pages.

3.1.2 Windows XP O/S

(1) Enter [Control Panel] -> click [Network Connection] -> right click and select [Open].
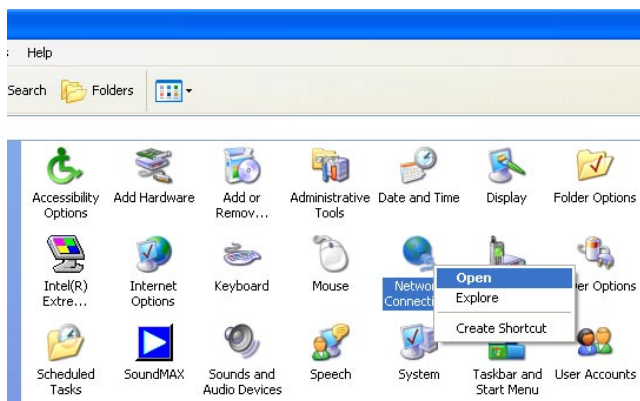

(2) Click [Local Area Connection] and right click and select [Properties].
(3) Click [General] -> click [Internet Protocol (TCP/IP), and click [Properties].
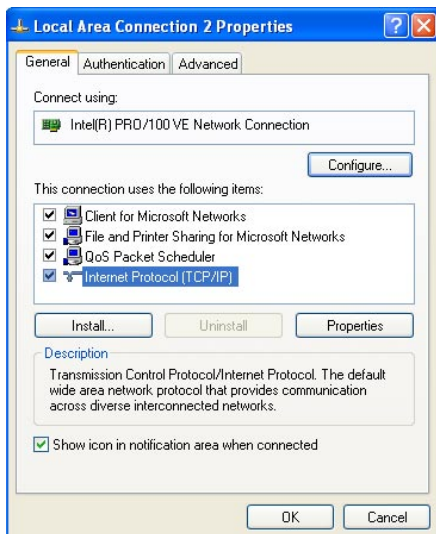

(4) Click [General], select [Obtain an IP Address Automatically], and [Obtain DNS Server address automatically], and press [Advance].
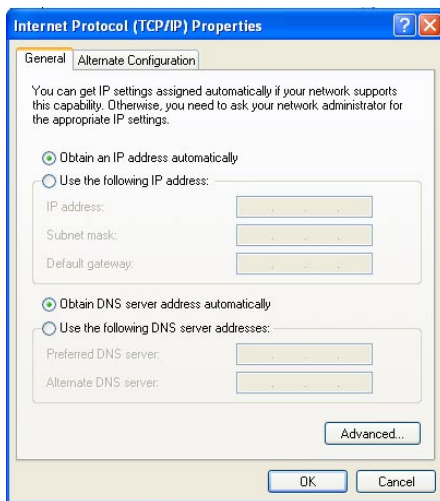

(5) Click [DNS] tab, unselect [Register this connection's address in DNS], and press [OK].
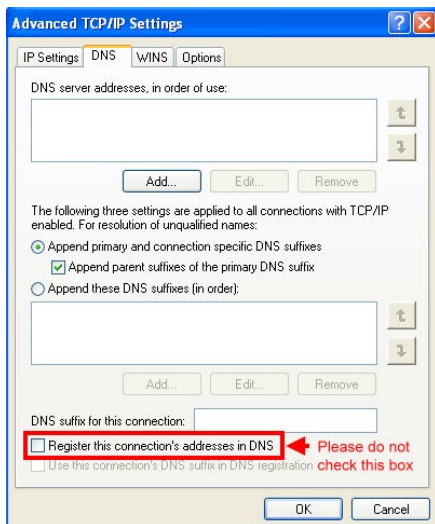

(6) Go back to [Internet Protocol TCP/IP] and press [OK].
(7) Press [OK] to close [Local Area Connection Properties].

3.1.3 Windows 2000 O/S

(1) Go to [My Computer], and enter [Control Panel], click open [Network and Dial Up Connections].
(2) Right click [Local Area Connection], and select [Properties]
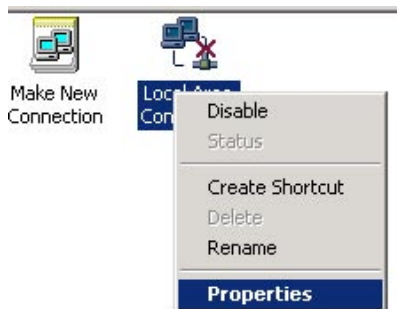

*Note: Please check if TCP/IP had been installed in the [Local Area Connection].

(3) Click [Internet protocol (TCP/IP)] and click [Properties].
(4) Select [Obtain an IP address automatically], and [Obtain DNS server address automatically]. And click [Advance].
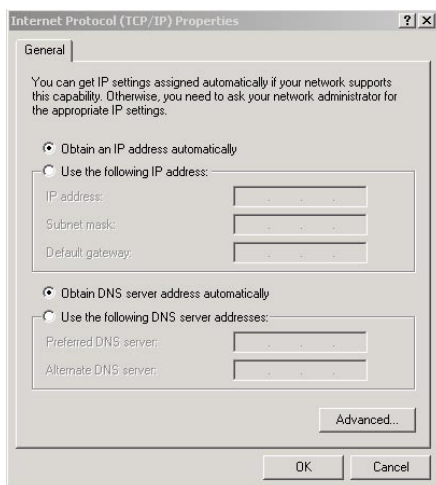

(5) Click [DNS] tab in [Advance TCP/IP setting] page, and unselect [Register this connection's DNS address, and press [OK].
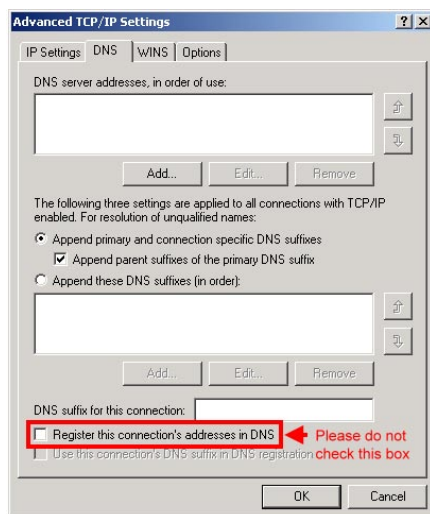

(6) Please close all pages.

3.1.4 Windows 98/95/ME O/S

The configurations in all Windows 98/95/ME are the same, and this manual takes Windows 98 as an example.

(1) Enter [Control Panel], and double click [Network].
(2) Click [Configuration] tab, and select [TCP/IP], click [Properties].
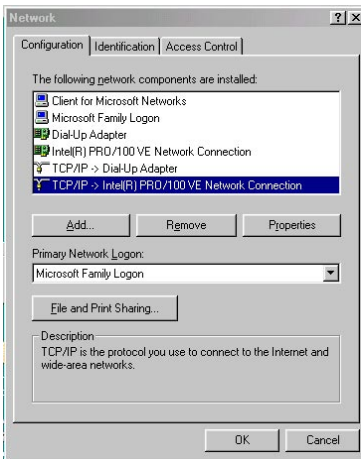

(3) Select [IP Address], and select [Obtain IP address automatically. Press [OK].
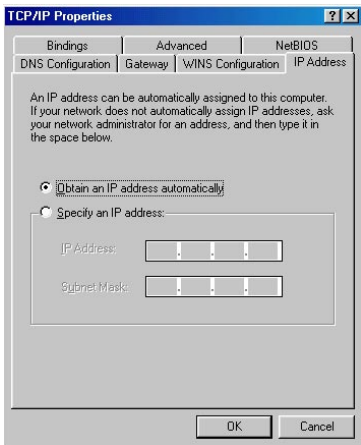

(4) Click [Gateway] tab, remove all the gateways, and press [OK] to close the window.
(5) Go to [Network] and press [OK] to close the page.
(6) The [Restart the windows] screen will pop-up, press [OK] to restart the PC. If the PC is not shown this message, restart the PC manually.

3.1.5 Mac OS 8.x~9.x O/S

(1) Open the [TCP/IP] configuration from [Control Panel].
(2) Select [Ethernet Network] in the [connection methods]; select [DHCP server] in [Configuration], and close this page.

3.1.6 Mac OS X O/S

(1) Go [System Configuration] in Macintosh category.
(2) Open [Network] configuration in [System Configuration]. If there is no [Network] configuration, select [Display all].
(3) Select [Built-in Ethernet] in [Display] from [Network] window. Select [Use DHCP] in [Setting] from [TCP/IP].
(4) Press [Apply].

3.2 Browser Configuration
The following examples are for Windows Vista/XP, skip this chapter if you are using Windows 2000/98/ME.

3.2.1 Windows Vista O/S
1. Open Internet Explorer, click [Tools]=>select[Internet Options]。

> *Note:When the dial up connection page appears, please close it, do not
>
> connect to Internet.
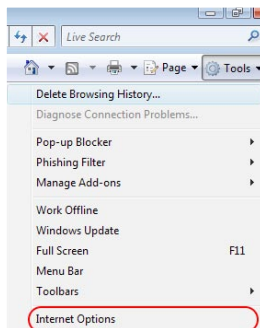

2. Select the [Connections] tab=>click [Never dial up a connection]=>click [LAN settings].
3. Uncheck the three boxes on the Local Area Network Setting page=>click[OK].
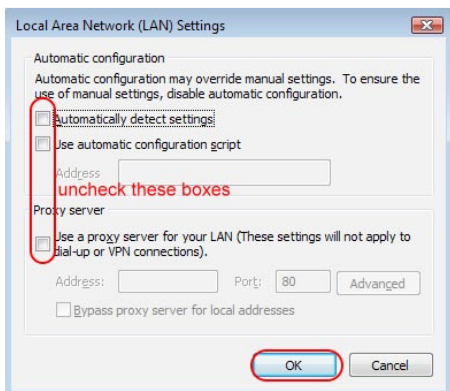

4. Click [OK] on the [Internet Options] page.

3.2.2 Windows XP O/S

The following examples are for Windows XP O/S, skip this chapter if you are using Windows 2000/98/ME.

(1) Open Internet Explorer (IE 6.0), select [Tools] menu and click [Internet Options]. If a [Dial-up Connection] window is pop-up, close it, and do not connect to the Internet now.

(2) Click [Connections] tab -> select [Never dial a connection] -> click [LAN Settings].

(3) Unselect all three options in the [Local Area Network LAN Setting].
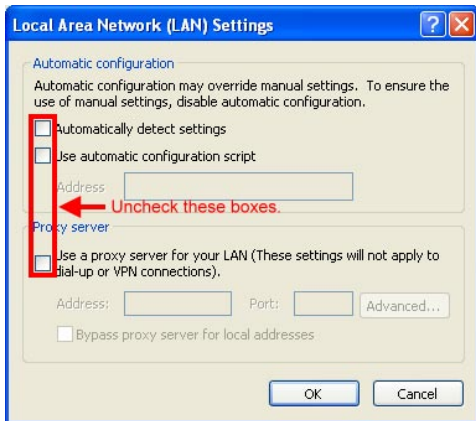

(4) Press [OK] in the [Internet Options].

3.2.3 Mac O/S

(1) Open Internet Explorer (IE 5.0) Go to [Edit] in the menu bar, select [Internet Explorer Preferences].
(2) Select [Proxies] options in [Network] on the left-side configuration items.
(3) Do not select [Web Proxy], press [OK].

④
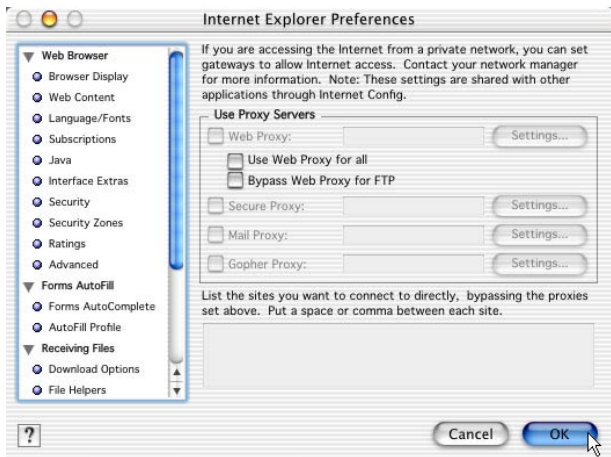

4.1 Quick Network Configuration

Basic configuration is required before connection your computer to the internet via WLBARGO. The connection methods may be differed by your contract to the ISP. Please reconfirm your connection conditions with your ISP prior to configure this router. The configuration procedures are as follow:

*Note: Anti-virus or Firewall software may prevent this router from being set-up properly. Please close such software through out the setting of WLBARGO.

(1) Open the Web browser (Internet Explorer 6.0). If you use dial-up network such as PPPoE, and are using Windows 2000/98/ME O/S. The [Dial-up Network] window will pop-up; do not connect to the Internet right now, and close the window.

(2) Type [192.168.1.1] in the browser's address bar, press [Enter].

http://192.168.1.1

*Note: [192.168.1.1] is the IP address for configuring CG-WLBARGO, and is not corega's company public internet address. After you have completed the configuration, connect to [http://www.corega-asia.com] for testing the connection.

(3) When log-in screen is appeared, type [root] for the username, and leave empty for the password. Press [Submit].

Username : root
Password :
Submit Reset

(4) Please select the language. e.g.) English. ->Select your region. e.g.) Singapore.=>Click [Apply].

Regional & Language Options

| Language | English |
| Region | Singapore |

Apply

(5) Click [Quick Installation Setting].
(6) When seeing this screen shot, click on [Next].
(7) Select your connection type. Please make sure that your ADSL connection type is correct as you enter; the correct information can be obtained from the documents given by your ISP. If not, consult with your ISP before setting.
4.1.1 Auto obtain IP (DHCP)

(1) If you are subscribing to auto obtain IP service (or DHCP Dynamic IP) from your ISP, such as Cable Modem that obtain an IP automatically for connection, please select [Auto obtain IP(DHCP)]. Click on [Next].

Setup Wizard - Network Connection(WAN setting)

Please configure network connection(WAN setting).

Please select your connection type.

- ⦿ Auto obtain IP(DHCP)…e.g.:Cable Modem.
- ○ Fixed IP
- ○ Float IP(PPPoE)

[< Back] [Next >] [Cancel]

(2) Press [MAC address clone] to obtain the Ethernet card's MAC address. Then press [Next].

Setup Wizard - auto obtain IP address

Please manually setup your network.

WAN port MAC address [00-50-18-21-CF-8A]

[MAC address clone]

[< Back] [Next >] [Cancel]

(3) Click on [Save] to perform connection tests.

Setup Wizard

Setup completed.

Save, please click on *save.*

Test result

Prepare for network testing…
Please wait 7 seconds.

Refresh   Close

(4) Within seconds, the result of the connection test will be appeared in the dialogue box to indicate the connection status. When [Connection ok] appears, click on [Close].

Setup Wizard

Setup complete.

Save, please click on *save*.

Test result

Prepare for testing …
Please wait 0 seconds
DHCP connection OK
IP address : 10.15.1.72
Subnet mask : 255.255.255.0
Default gateway : 10.15.1.254
DNS server1 : 10.15.1.2

Refresh   Close
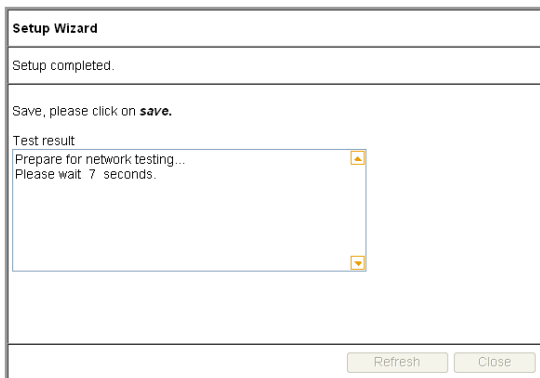

(5) Open the web browser (IE 6.0), and test with any website for testing the connection.

  * Note: if the connection to the website fails. Restart your Cable Modem, and check the installation of CG-WLBARGO properly, such as the LAN/WAN connections. After verifying that, restart this chapter again for installation.

4.1.2 Fixed IP

(1) If you are subscribing Fixed IP connection from your ISP, then select [Fixed IP], and click on [Next].

(2) Enter the network setting provided by your ISP. Then click on [Next].

(3) Click on [Save] to perform connection tests.

Setup Wizard

Setup completed.

Save, please click on *save.*

Test result

Prepare for network testing...
Please wait 7 seconds.

Refresh   Close

(4) Within seconds, the result of the connection test will be appeared in the dialogue box to indicate the connection status. When [Connection OK] appears, click on [Close].

Setup Wizard

Setup completed.

Save, please click on *save.*

Test result

Prepare for network testing...
Please wait 0 seconds.
Fixed IP connection OK
IP Address : 10.15.1.41
Subnet Mask : 255.255.255.0
Default Gateway : 10.15.1.254
DNS Server 1 : 0.0.0.0
DNS Server 2 : N.A.

Refresh   Close

(5) Open the web browser (IE 6.0), and test with any website for testing the connection.

   *Note: If the connection to the website fails. Please make sure the data you entered are correct , or any mistake occured in the process of the installation, such as the LAN/WAN connections. After verifying that, repeat these setps in the section.

4.1.3 Float IP (PPPoE)

(1) If you are subscribing Float IP connection (or known as PPPoE) from your ISP, you need to obtain a set of username and password from your ISP and acquire a IP address each time your connect to the Internet, select [PPPoE], and then Next].

Setup Wizard - Network Connection(WAN setting)

Please configure network connection(WAN setting).

Please select your connection type.

○ Auto obtain IP(DHCP)...e.g.:Cable Modem.
○ Fixed IP
◉ Float IP(PPPoE)

```
Prepare for network testing...
Please wait  7  seconds.
```

Refresh   Close

(4) Within seconds, the result of the connection test will be appeared in the dialogue box to indicate the connection status. When [Connection OK] appears, click on [Close].

Setup Wizard

Setup complete.

Save, please click on **save**.

Test result

```
Prepare for testing ...
Please wait 0 seconds.
PPPoE connection OK.
IP address : 10.15.1.72
Subnet mask : 255.255.255.0
Default gateway  : 10.15.1.254
DNS server1 : 10.15.1.2
```

Refresh   Close
(5) Open the web browser (IE 6.0), and test with any website for testing the connection.

*Note: If the connection to the website fails. Please make sure the data you entered are correct , or any mistake occured in the process of the installation, such as the LAN/WAN connections. After verifying that, repeat these setps in the section.

4.2 Establishing the Wireless Internet Connection

So far, you should be able to connect to the Internet wirelessly. However, please be reminded that your network is not safe and the connection is open to anyone. Please consult [Chapter 5 Wireless Security Configuration] for security setting. Wireless connection is illustrated as following.

4.2.1 Setup Wireless Adapter

Hereunder is the setting on Centrino Notebook as an example, for wireless adapters in other brands, please refers to the original manuals.

<Windows XP (SP1) O/S>

(1) Go [Control Panel] -> double click on [Network connection] -> right click on [Wireless Network Connection] -> select [properties] -> click on [Wireless Network] tab -> select [Use Windows to configure my wireless networks setting] , and press [OK].
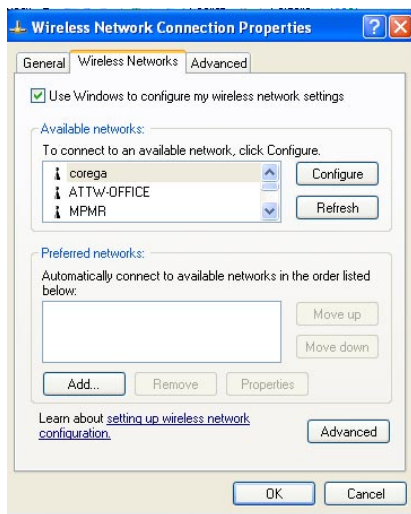

(2) Go [Control Panel] -> [Network connection] again ->Right click [Wireless network connection] ,select [Available wireless network connection], choose one available network e.g.) corega , and click [Connect].
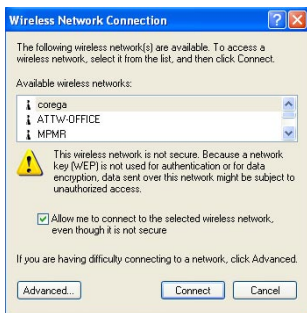

(3) Connection status will appear in the bottom right of the screen.

<Windows XP (SP2) O/S>
(1) Go [Control Panel], double click on [Network connection], right click on [Wireless Networks Connection], select [properties], click on [Wireless Network] tab, select [Use Windows to configure my wireless networks setting] , and press [OK].
(2) Go [Control Panel] -> [Network connection] again -> right click [Wireless network connection] , select [Available wireless network connection], e.g.) corega , and click [Connect].
(3) Connection status will appear in the bottom right of the screen.
*Note: The wireless connection has been established now. Please go to corega's website at http://www.corega-asia.com to check the connection to the Internet.

To prevent from unlawful access to your network, you are recommended to perform wireless security setting. Type [192.168.1.1] in the browser's address bar, press [Enter]. Enter the function menu, ad click on [802.11g/b Security setting] item. And select WEP or WPA setting.

```
Wireless Setting
    802.11 g/b Setting
    802.11 g/b Security setting
    Connection control
```

5.1 WEP Setting

In order to prevent your information from being hacked, it is recommended to use WEP encryption when using wireless connection.

```
                    Wireless Setting / 802.11g/b Security Setting

Authentication:        1  WEP
Cipher Type            2  WEP
Encryption             3  64 bit
Auto generate WEP    a.                               b.  Generate Key    Clear
WEP KEY                   16 decimals(0- 9/ a-f)
4   KEY1            c.
    KEY2
    KEY3
    KEY4
WPA shared key            ASCII key (8-63 characters)    16 decimals(64 characters)

DTIM                 5  3      (1 - 5)
Radius Server           Radius Server Setup

                    6   Save    Cancel    Back
```

(1) Select [WEP] from Authentication menu.
(2) Select [WEP] from Cipher menu
(3) Select [64-bit] or [128-bit] from the Encryption menu.
(4) Type encryption code in [Key1].

   *64 bit: hex (0~9, a~f), 10 digits in total.
   *128 bit: hex (0~9, a~f), 26 digits in total.

   Or you can click [Generate Key] to obtain a password automatically:
   a. Enter any character in the column of [Auto generate WEP].
   b. Click [Generate Key].
   c. Passwords will be generated automatically in the columns of Key1 ~ Key4.

   *P.S. Every kind of network adapter might have different encryption ways, so [Generate Key] isn't recommended. Check before selection.
(5) Recommended to keep default value of [DTIM] .
(6) Save your settings by [Save].

5.2 WPA Setting

WPA is encrypted by a periodic update, making it more difficult to be hacked. Home users and company users are recommended to use <WPA-PSK> and <WPA-EAP> respectively.

<WPA-PSK>

(1) Select [WPA-PSK], [WPA2-PSK] or [WPA/WPA2-PSK(Recommended)] in the column of [Authentication] .
   a. [WPA2-PSK]: The 2nd generation encryption technology performs stricter protection than ever. Before selection, please check the function availability of your network adapter, or select b.
   b. [WPA/WPA2-PSK]: If selected, encryption type will be defined automatically according to the corresponding wireless network adapter.
(2) Select [Cipher Type]. (Recommended to keep the default.)
(3) After selecting [WPA shared key], key in the Pre-Shared-Key in connection with the communication device in the below column. Please enter 8~63 alphabets or numbers.

Wireless Setting / 802.11g/b Security Setting

*Note: The wireless network adapter is required to have the same setting; otherwise, the connection will fail.

(4) Recommended to keep default value of [DTIM].
(5) Press [Save] to save setting.

<WPA-EAP>

(1) Select [WPA2-EAP] or [WPA/WPA2-EAP](Recommended). in the column of
    [Authentication]
    a. [WPA2-EAP]: The 2nd generation encryption skill performs stricter protec-
       tion than before. Before selection, please check the function availability
       of your network adapter, or select b.
    b. [WPA/WPA2-EAP]: If selected, encryption type will be defined automati-
       cally according to the corresponding wireless network adapter.

(2) Select [Cipher Type] (Recommended to keep the default).

Wireless Setting / 802.11g/b Security Setting

1 Authentication	WPA/WPA2 - EAP	
2 Cipher Type	Auto (AES / TKIP)	
Encryption	64 bit	
Auto generate WEP		Generate Key Clear
WEP KEY	16 decimals(0- 9/ a-f)	
KEY1		
KEY2		
KEY3		
KEY4		
WPA shared key	ASCII key (8-63 characters) 16 decimals(64 characters)	
3 DTIM	3 (1 - 5)	
Radius Server	4 Radius Server Setup	

5 Save   Cancel   Back

  *Note: The wireless network adapter is required to have the same setting; otherwise,
        the connection can't succeed.
(3) Recommended to keep default values of [DTIM].

(4)You may click [RADIUS Server] for parameter settings, but check with MIS
    staff before setting.

(5) Save your settings by [Save].

The chapter will briefly introduce all functions of this product, and spell them out. Log in the management program and the below interface will appear.

Add / Edit / Delete PC list
If new added pc cant be connected, please enter its MAC address.

1 PC name [   ]
IP address ⦿ Auto obtain (DHCP client)
○ Manual obtain (DHCP client) 192.168.1. [   ]
Connection Type [LAN ▾]

2 MAC address ⦿ Auto searching (connection mode)
○ MAC address [00-50-BF-E7-92-0F]

3 [Add PC Data]   [Cancel]   [Back]

(1) Enter the pc name and select PC obtain IP method.
(2) Configure the MAC address data of PC.
(3) Click [Add PC Data] to complete the setting.

<Wireless setting/802.11g/b setting>

Wireless Setting / 802.11g/b Setting

ESSID	corega
Mode	802.11g / b
Channel	11
TX Burst	Enable
Hidden AP	Disable
WMM	Disable
WDS	Disable
Remote AP MAC	

Save   Cancel   Back

ESSID	ESSID is a name that makes wireless adapter identify this Router . The default ESSID is [corega].
Mode	• 802.11b/g: auto connect in either 802.11b or 802.11g. • 802.11g: connect in 802.11g mode.
Channel	When there is interruption, other channels can be selected.
TX Burst	Enable/Disable frame burst function. When it is checked, transmit throughput will be improved. Only work with corega WLCBGMO or WLUSB2GO.
Hidden AP	when it's enabled, ESSID will not be seen in the network.
WMM	Select [Disable/Enable]to manage function of wireless bandwidth
WDS	P to MP(P to MP bridge mode): setup the wireless connection with another AP/Router. ※ Needs to enter the MAC address of that AP, and each connected AP needs to have the same setted channel. AP Repeater (Repeater Mode): When signal is hard to reach the other AP, users can set this product in AP repeater mode. ※ Need to enter the MAC address of the other AP, and set the same ESSID.

<Wireless setting/802.11g/b security setting>

This section contains WEP, WAP-PSK, WPA2-PSK, WPA-EAP and WPA2-EAP encryption setting, please refer to Chapter 5 to get detail information.

<Advanced setting/virtual server>

Virtual server is an appointed port opened by the PC in connection with the
product, allowing other users connecting up via WAN. Open servers or special
online games can take advantage of this function. Setting processes are as
follows:

(1) Select a PC to be the virtual server.
(2) Select Service.
(3) Enter Port Range of internet connection with the server, and Port Range
    used by the server software.
(4) Select Protocol.
(5) [Remark] column can be filled in with an explanation of the server.
(6) Click [Submit] after setting. All info will show in the below table.

Advanced Setting / Virtual Server

1 Connecting with a pc. [Please select a PC. ▼]
2 Service   [User Defination ▼]
3 Port Range   [   ] ~ [   ] (1~65535) ☐ Advanced Setting

When the installation fails or the connection doesn't succeed, it's recommended to take the following actions.

(1) Find your problem in the troubleshooting collection.

(2) Search on our official website at http://www.corega-asia.com for the latest information of this product.

(3) Go to our official website at http://www.corega-asia.com->click [Support] ->select the [Online Customer Support] item->fill the form page and note following information. We will contact you as soon as possible.

・Product name: e.g.) WLBARGO

・Firmware version: access the management program to check.

・Your ISP service name.

・Windows system: e.g.) Windows98/2000/XP and so on.

・WEB browser(Version): e.g.) IE5.0/5.5/6.0 and so on.

・Network adapter manufacturer and its driver version.

・Connection way: fixed IP, dynamic IP or PPPoE dial-up connection.

・What is your problem and situation? e.g.) unable to internet.

・What is the error message or picture?

Q1.Not able to connect to the Internet.

  Please make sure if the below processes are complete or not.

(1) Is your subscription to ISP expired?

(2) Have the powers of all relevant devices been switched on, or have cables or plugs been connected correctly?

(3) Has the cable line between the modem and internet been connected correctly?

(4) Have the cable lines among the modem, product and PC been connected correctly?

=> When the product and modem have been connected correctly, WAN LED will light up. If no light, please remove cable line, then re-plug in. If the modem has a MDI/ MDI-X button, please try to switch it.

=>When the connection between PC and the product is normal, the Link/ Act LED of the front LAN port will light up after the PC's power is turned on.

(5) Has the connection with ADSL's splitter been linked up correctly (There are two kinds of splitter: 'Telephone' and 'ADSL modem')?

(6) Does the PC's network adapter function normally?

 => Right click on [My Computer] and select [properties] => [Device manager] =>Display[Network adapter]. If there is a marking of ? or !, it means that the network adapter doesn't perform normally. Please re-install it.

(7) Is your network setting correct?

 => Check if TCP/IP setting is correct or not (Please refer to [3.1 TCP/IP

Configuration to check your setting].
(8) Has all information provided by your ISP been entered correctly?
(9) Are the settings of your web browser correct?

Q2. Can not access the management program
A: Please confirm the following settings.
(1)Is the TCP/IP address correct?(Please refer to 3.1)
(2)Is the cardbus successfully installed? (Right click [my computer] select [properties]->click[device manager], if [?] or [!] symbols appear on the network adapter icon, please re-install the product.)
(3)Make sure the [Proxy server] box is unchecked.(refer to chapter 4)

Q3. Not able to log in the management program.
A: You have 4 ways to check and solve the problem:
(1) Close and re-open the IE browser and login the program again.
(2) Log out and re-login the Windows OS. Then login the program again.
(3) Probably the management program is accessed from the other user. Wait until that user exits the program.
(4) Reset to default settings (Refer to Q9. for more details) and re-login the program.

Q4.Forget the password.
A: If you ever changed the password of the management program, please enter the one you set. If you forget the password, please reset to default settings. Please refer to Q9 for more details.

Q5. How to set or change the password of the management program?
A: Access the management program, and then click [Management]. Enter new password in the columns of [Admin login passowrd], and [password confirmation], then click [Save]. When you re-access the management program, you must enter new username and password (The default username is [root] and no password.).

Q6. Failure in firmware update.
A: If the firmware update fails, please contact us by Online Customer Support webpage. Please go to the website of http://www.corega-asia.com -> click on [Support] and right click the [Online Customer Support] item -> Filling the form -> Click [Submit].

Q7 How to acquire your PC's IP address?
A: If you want to check your PC's IP address via the product, you may refer to the below steps:

<Windows XP/ 2000>

(1) Click [Start] => [Programs] => [Command prompt].
(2) Input [ipconfig] => [Enter].
(3) Confirm IP address (which sould be 192.168.1.x). If the IP is incorrect, please enter 1-byte character as [ipconfig /renew] => Press [Enter].

<Windows Me/ 98/ 95>

(1) Click [Start] => Click [Run].
(2) Input [winipcfg] in the column => press [Enter].
(3) Select your network adapter to display IP address. The IP should be 192.168.1. x ,if none, please click [Release] => Click [Renew].

Q8. How to reboot the product?
A: Reboot to get new setting values applied. The steps are as follows: open the management program-> Click on [Management]-> Click on [Proceed] in the [Reboot] column .

  *Note: The definitions of [Reboot], [Firmware update], and [Reset to default settings] are different. Please make sure of your intention before proceeding.

Q9: How to reset to default settings?
A: If you forget the password, get failed in setting or product hang up; you can reset the product's settings to default values.
(1) Use a spindle item (e.g. a clip) to press [Reset button] in the front side of the product.
(2) After the [Status] light goes out, stop to press the button. When the [Status] light starts to flash, the system has reset to its default values.

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

   - Reorient or relocate the receiving antenna.
   - Increase the separation between the equipment and receiver.
   - Connect the equipment into an outlet on a circuit different from that to
     which the receiver is connected.
   - Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the folowing two conditions:

   (1) This device may not cause harmful interference, and
   (2) this device must accept any interference received, including interference
       that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

IMPORTANT NOTE:
FCC Radiation Exposure Statement:
This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

IEEE 802.11b or 802.11g operation of this product in the U.S.A. is firmware-limited to channels 1 through 11.

This equipment has been SAR-evaluated for use in laptops (notebooks) with side slot configuration.

corega®
