WEEE Compliance:

Laser Safety:

The scanner is classified as a Class 2 laser product according to EN 60825-1 regulations and as a Class II laser product according to CDRH regulations.

For installation, use and maintenance it is not necessary to open the device.

There is a safety device which allows the laser to be switched on only if the motor is rotating above the threshold for its correct scanning speed.

The laser beam can be switched off through a software command (see also the WinHost Help On-Line).

Warning and device class labels

The laser diode used in this device is classified as a class 3B laser product according to EN 60825-1 regulations and as a Class IIIb laser product according to CDRH regulations. As it is not possible to apply a classification label on the laser diode used in this device, the following label is reproduced below.

Laser diode class label

Any violation of the optic parts in particular can cause radiation up to the maximum level of the laser diode (30 mW at 630 to 680 nm).

Electrical Connections:

DS4600A is equipped with a cable terminated by a 25-pin female D-sub connector for connection to the power supply and input/output signals.

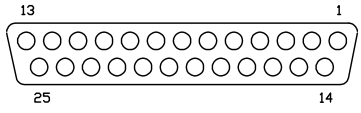

CAUTION

Do not connect GND and SGNDs (Main or Aux) to different (external) ground references. GND and SGNDs (Main and Aux) are internally connected through filtering circuitry which can be permanently damaged if subjected to voltage drops over 0.8 Vdc.

The details of the connector pins are indicated in the following table:
