

Extron ISS 506

The New Presentation Enhancing Seamless Switcher

The ISS 506 is a six input seamless switcher designed for integration environments that provides very high quality scaling for RGB computer-video, HDTV, and standard definition video signals. With presentation-enhancing features such as independent preview output, numerous switching transition effects, logo insertion, title keying, multiple points of control, and flexible PIP capability, the ISS 506 delivers increased capabilities for boardrooms, live events, and other high-end presentation environments.

Key Features:

- Truly seamless switching between six inputs via two fully independent scalers
- Six configurable inputs, four of which accept any signal from RGB to standard definition video
- Optional SDI/HD-SDI input
- Independent Preview and two simultaneous Program outputs
- Optional output expansion possibilities including DVI-D, HD-SDI, and scan-converted video
- Multiple wipe, dissolve, and cut transition effects for professional, customised presentations
- Special presentation enhancing features: logo insertion, title keying, and PIP - Picture in Picture
- User selectable output rates up to 1600x1200, including HDTV rates up to 1080p
- Six input audio switching with input gain/attenuation, cross-fade switching capability, and output volume control
