Introduction

Thank you for purchasing your Digital Video camera. Not only can it shoot video clips and take photos, it also has the built-in functions of a webcam, which you can use for video conferencing. In addition, an SD/MMC card can be inserted into the DV camera to expand its memory.

Your camera includes the patented Active Images® technology, the most powerful way to share your photos that enable you to:

- Create fun, personalized videos
- Select from built-in styles
- Combine selected music with sound track
- Personalize with titles and credits
- Annotate your JPEG photos with sound, text and more
- Generally produce videos created with automatic editing and synchronized transitions and effects.

In short, everything you need to get the most out of your photos.

Key Features

- 3.1 Megapixel DV camera with choice of 3 image resolutions - 2048 x 1536 Pixels (QXGA), 1280x1024 Pixels (SXGA), 640 x 480 Pixel (VGA). The resolution for Video is 320 x 240 pixel (QVGA).
- 4x digital zoom
- Your DV camera can be used as a Web Cam for Video Conferencing and Instant Messaging.
- 1.5" Color TFT preview screen
- Create your own movies
- Add special effects with Digital Images Software ®Manager
- Record about 177 minutes of video with 1GB SD Card (not included)
- 3 in 1: take digital photos or connect to PC as Web-Cam
- Built in microphone and speaker
- Expansion SD memory slot

What your digital video camera includes:

- Digital Video Camera
- USB cable

- TV Cable
- Digital Images Software Manager®
- User manual
- Strip

Computer System Requirements

- Windows 2000 or XP
- Pentium II 300 or higher
- 64MB RAM
- 100MB free hard drive space
- CD-ROM drive
- Available USB port
- 16-bit color display adaptor

Preparing Your Camera for Use

Battery Installation

Your DV camera requires three "AAA" batteries. It is recommended that alkaline batteries be used.

1. Slide the battery cover to open the battery compartment.
2. Insert the batteries in accordance with the polarity indicated.
3. Replace the battery cover.

Note: Unless you are using an SD memory card, opening the battery compartment and/or removing the battery will erase the videos and photos currently stored in the camera. Download your videos and photos as often as possible. Data will be lost when the DV camera is turned off or the battery runs low. Do not open the battery door before turning off your DV camera.

Installing a Memory Card

An SD compatible memory card can be inserted into your DV camera, which will allow an increase in the number of movies, or photos that can be taken before the need arises to transfer them to a computer.

NOTE: limited internal memory is provided for test images. Those images will be deleted when camera power is turned off. Please download the images before power off. SD memory card is required for normal use.

Insert the card by pushing it firmly into the slot next to the battery compartment until it clicks into place.

Once the memory card is inserted the following message will appear on the LCD Monitor:

"Copy To Card

Yes No"

Pressing the left/right button to select "YES" will result in all images in the internal memory of the DV camera being copied to a new directory in the memory card.

Pressing the left/right button to select "No" will result in the images remaining in the internal memory of the DV camera. However such images will not be accessible again until the external memory card is removed or images are downloaded to a computer.

Pictures copied to the memory card may be accessed in "Playback mode". In "Playback mode" pictures in the current directory may be viewed. Use the down arrow to view each directory on the external memory card.

The words "Change directory" will appear followed by the next directory of pictures.

Once an external memory card is inserted in the camera, all the images taken will be stored on the external memory card.

Caution:

- This product supports SD cards up to 1GB.
- Formatting will delete all data on the SD Memory Card including protected data.
- Do not remove the SD memory Card during formatting as this may damage the card and render it unusable.
- Be sure to format the card with the camera.
- SD memory cards formatted on a PC or device other than the DV camera should not be used.
- All the data in the built-in memory will be lost if no SD Memory Card has been inserted in the DV when you change your batteries.

The Camera Mode

Flash

1. Press **FLASH**  button. The icon  will keep flashing on the LCD until the flash is fully charged. The flash function is forced on.
2. Repeatedly press **FLASH** to select the icon  shown on the LCD. The automatic flash function is activated.

Using your DV Camera as a Web Cam

Press the  button to set your DV to **Normal** mode.

Connect your camera to your computer using the USB cable.

Web Cam Express

Now that you have your camera installed you can use it to capture short movies called AVI files that can be saved directly to the PC. The length of time you can record an AVI while the camera is connected to your computer will vary, depending on how much hard drive space you will use to save the file. Please take note that these AVI files take up a lot of hard drive space. This is done through the PhoTags WebCam Express program. This next section will walk you through capturing an AVI file.

1. Make sure that your camera is connected via the USB cable to your PC

2. Double-click the “WebCam Express” icon  that is on your desktop to launch the “PhotoTags WebCam Express” program.

3. Adjust your WebCam to the desired position. The screen will display what the WebCam “sees”.

3. To add audio to your video, plug a microphone into your computer.

4. Click the “Capture” button to start recording the video. The recording elapse time will appear under the video.

5. Click the “Pause” button to hold the recording. To continue recording click the “Capture” button again.

6. To finish recording click the “Stop” button. The videos will be automatically saved into a default directory.

Note: *Taking snapshots*- to learn how to capture JPEG snapshots from your WebCam or from your existing AVI movies, go to the “Take Snapshots” section in the Quick Start help.

To learn how to change the user settings, go to the “Set User Preferences” section in the Quick Start help.

- What it does
- Basic instructions from Quick Help

Video Conferencing

Your camera can be used as a webcam for video conferencing:

1. Connect the camera to your computer with USB cable.
2. Run the video conference software **Microsoft NetMeeting** on your computer.
3. Input IP address in the address bar and dial.
4. Select **[Tool][Video][Send]** and **[Transfer]** options after your call has been received.

Installing Digital Images Manager Software

Insert the Software CD that came with your camera into the CD-ROM drive.

Make sure that your camera is NOT connected to the computer.

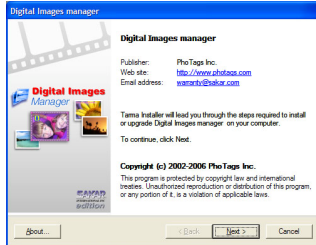

The Digital Images Manager and camera driver installation screen will appear. You will have to install both Digital Images Manager and the camera driver and restart your computer in order to complete the software installation.

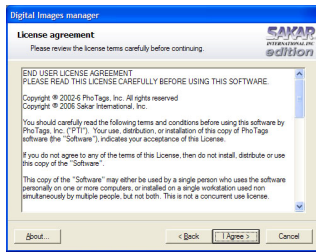

1. Click on "Install Digital Images Manager".

2. Select your camera model from the drop down list and click the "Install" button to install Digital Images Manager.

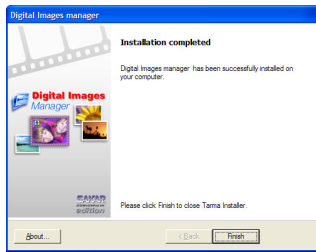

3. On the "Digital Images Manager" screen, click the "Next" button.

4. Please review the license terms and click the "Agree" button to continue.

5. Let the "Digital Images Manager" installer create the folder where the program will be installed, and then click "Install".

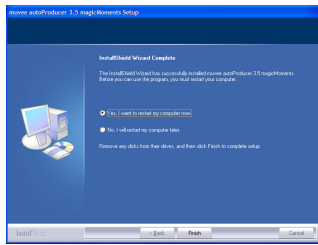

6. Click "Finish" to let the "Digital Images Manager" installer finish the installation program.

7. Click "Next" to begin installation of muvee AutoProducer.

8. Please review the license terms and click the "I accept" button to continue.

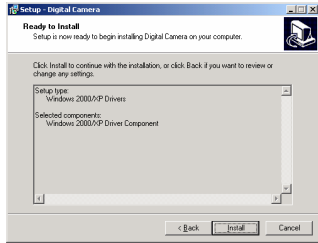

9. Click on "Finish" to complete installation of muvee AutoProducer.

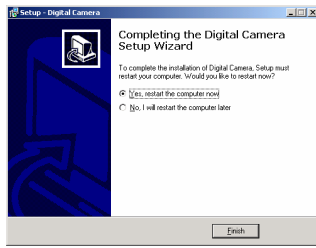

10. Click on "Camera Driver Installation" to install drivers.

11. Click "Next" to begin installation of drivers.

12. Click "Install" to continue installation of drivers.

13. Once the program has finished installing please click “Finish” and restart your computer.

Congratulations!! You have successfully installed the “Digital Images Manager” software.

Transferring Images to your PC

Press the  button to set your DV to **PLAYBACK** mode before downloading photos. The **MSDC** icon will appear on the LCD.

Transfer Images Using Digital Images Manager:

1. Set your camera to PLAYBACK mode.
2. Connect your camera to your computer using the USB cable provided.
3. Make sure that your camera is connected and is turned ON.
4. The “Camera/Removable Media Auto Detect” window will automatically appear.

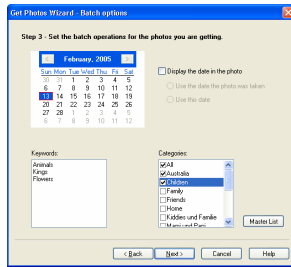

5. The number of pictures on the camera or memory card will appear on the window.
6. Click “OK” if you wish to transfer the photos and save them to your computer. The “Digital Images Manager” application you installed will open in the “Get photos” wizard mode and will ask you to select the photos you wish to transfer.

Select your photos and click "Next" to continue.

7. Add Active Captions to your pictures. You can add a date, keywords, categories and more. Click "Next" to continue.

8. On the next screen, select where to place your photos and click the “Finish” button to copy the photos to your computer.

9. All of the pictures you have imported will appear in the “Select Photos” main window.

Manual Photo Download:

Get photos manually using “Digital Images Manager”

Use the “Digital Images Manager” program to import the photos from your camera.

1. Plug one end of the USB cable into the USB slot on your camera.
2. Plug the other end of the USB cable into a USB port on your computer.

3. Make sure that your camera is connected and turned ON.

Double-click the “Digital Images Manager” icon  on your desktop to launch the “Digital Images Manager” program.

Click on the “Get Photos” button on the Main Menu.

- a. Select "Custom Copy". Click "Next" to continue.

- b. Select your photos and click "Next" to continue.

- c. Add Active Captions to your pictures. With this feature, you can add a date, keywords and categories. Click "Next" to continue.

- d. On the next screen, choose where you wish to place your photos on your computer. Click on "Finish" to copy the photos to the location you selected. All of the pictures you imported will appear in the "Select photos" main window.

2. Express Copy Method:

Select this option if you wish to have all the images transferred to the PC without the option of selecting photos. In this mode you will not see a preview of the images transferred. For more information please refer to the Quick Start guide in Digital Images Manager.

Transfer Images Directly From Windows

1. Plug one end of the USB cable into the USB slot on your camera.
2. Plug the other end of the USB cable into a USB port on your computer.
3. Make sure that your camera is connected and is turned ON.
4. Click on the START button in Windows.
5. Click on the MY COMPUTER Icon
6. Your memory card will appear as a REMOVABLE STORAGE DEVICE.

7. Click on the REMOVABLE STORAGE DEVICE to view the images. The images are stored in the subfolder called DCM100.
8. You can now copy and paste the images to any directory you choose.

Maintenance of Your Digital Camera

Your DV camera is a delicate instrument- please handle it with care.

Technical Support

For technical support issues please visit our website at www.sakarhelp.com. You can find manuals, software and FAQ's at the website. Can't find what you are looking for? Fill out an online ticket and one of our technical support team members will answer questions or call 877-397-8200 or 732-476-5098 to access our technical support information on the phone. For question on warranty information please email warranty@sakar.com

Q: How do I restart my camera if the camera freezes up?

Open the battery door and remove the batteries for a few minutes then re-install the batteries with the correct polarity facing up. Press the power button to start your camera.
