SENNHEISER

evolution wireless **G3**

EM300

Contents

An animated instruction manual can be viewed on the EM 300 G3 product page on our website at www.sennheiser.com.

Important safety instructions

- Read this instruction manual.
- Keep this instruction manual. Always include this instruction manual when passing the product on to third parties.
- Heed all warnings and follow all instructions in this instruction manual.
- Only clean the product when it is not connected to the mains. Use a cloth for cleaning.
- Refer all servicing to qualified service personnel.
  Servicing is required if the product has been damaged in any way, liquid has been spilled, objects have fallen inside, the product has been exposed to rain or moisture, does not operate properly or has been dropped.
- WARNING: To reduce the risk of short circuits, do not use the product near water and do not expose it to rain or moisture. Do not place objects filled with liquids, such as vases or coffee cups, on the product.
- Only use the supplied mains unit.
- Unplug the mains unit from the wall socket
  – to completely disconnect the product from the mains,
  – during lightning storms or
  – when unused for long periods of time.
- Only operate the mains unit from the type of power source specified in the chapter ''Specifications'' (see page 54).
- Ensure that the mains unit is
  – in a safe operating condition and easily accessible,
  – properly plugged into the wall socket,
  – only operated within the permissible temperature range,
  – not covered or exposed to direct sunlight for longer periods of time in order to prevent heat accumulation (see ''Specifications'' on page 54).
- Do not block any ventilation openings. Install the product in accordance with the instructions given in this instruction manual.
- Do not install the product near any heat sources such as radiators, stoves, or other devices (including amplifiers) that produce heat.
- Only use attachments/accessories specified by Sennheiser.

Overloading

Do not overload wall outlets and extension cables as this may result in fire and electric shock.

Replacement parts

When replacement parts are required, be sure the service technician uses replacement parts specified by Sennheiser or those having the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.

Danger due to high volumes

This product is capable of producing sound pressure exceeding 85 dB(A). 85 dB(A) is the sound pressure corresponding to the maximum permissible volume which is by law (in some countries) allowed to affect your hearing for the duration of a working day. It is used as a basis according to the specifications of industrial medicine. Higher volumes or longer durations can damage your hearing. At higher volumes, the duration must be shortened in order to prevent hearing damage. The following are sure signs that you have been subjected to excessive noise for too long a time:

- You can hear ringing or whistling sounds in your ears.
- You have the impression (even for a short time only) that you can no longer hear high notes.

Intended use

Intended use of the ew 300 G3 series products includes:

- having read these instructions especially the chapter ''Important safety instructions'',
- using the products within the operating conditions and limitations described in this instruction manual.

''Improper use'' means using the products other than as described in this instruction manual, or under operating conditions which differ from those described herein.
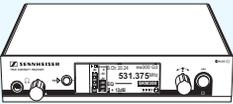

The EM 300 G3 rack-mount receiver

This receiver is part of the evolution wireless series generation 3 (ew G3). With this series, Sennheiser offers high-quality state-of-the-art RF transmission systems with a high level of operational reliability and ease of use. Transmitters and receivers permit wireless transmission with studio-quality sound.

Features of the evolution wireless 300 G3 series:

- Optimized PLL synthesizer and microprocessor technology
- HDX noise reduction system
- Pilot tone squelch control
- True diversity technology
- Switching bandwidth of 42 MHz
- Safe configuration of a multi-channel system via a network
- Scan function (Easy Setup) for scanning the frequency banks for unused channels

Areas of application

The receiver can be combined with the following optional components of the ew G3 series (see "Accessories and spare parts" on page 52):

| Receiver	Transmitters	Combinable with
EM 300 G3	SK 300 G3	• Clip-on microphones: ME 2, ME 4 • Headmic: ME 3 • Instrument/line cable: CI 1, CL 1
	SKM 300 G3	Interchangeable microphone heads: • MMD 835-1, MMD 845-1 • MME 865-1

The devices are available in the same UHF frequency ranges and are equipped with the same frequency bank system with factory-preset frequencies. An advantage of the factory-preset frequencies is that
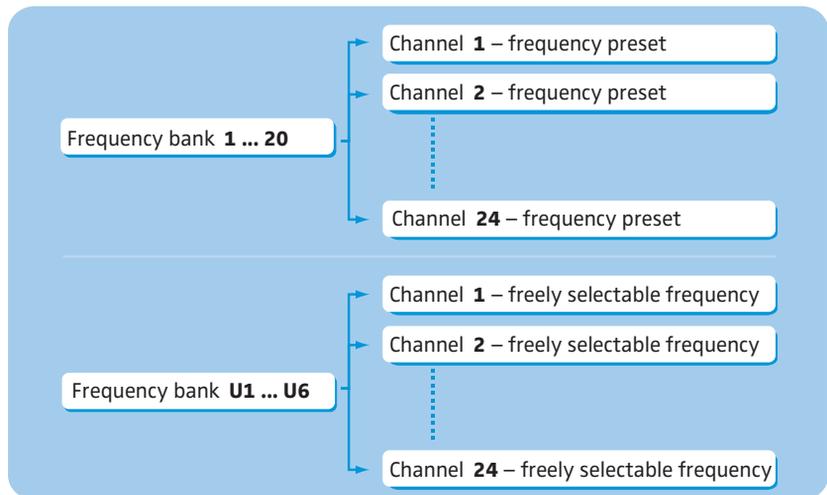

• a transmission system is ready for immediate use after switch-on,
• several transmission systems can be operated simultaneously on the preset frequencies without causing intermodulation interference.

The frequency bank system

The receiver is available in 6 UHF frequency ranges with 1,680 frequencies per frequency range:

| Range **A**: 516 – 558 | Range **G**: 566 – 608 | Range **B**: 626 – 668 | | Range **C**: 734 – 776 | Range **D**: 780 – 822 | Range **E**: 823 – 865 |

```
500            600            700            800      MHz
```

Each frequency range (A–E, G) offers 26 frequency banks with up to 24 channels each:

Frequency bank **1 … 20**	Channel **1** – frequency preset
	Channel **2** – frequency preset
	Channel **24** – frequency preset

Frequency bank **U1 … U6**	Channel **1** – freely selectable frequency
	Channel **2** – freely selectable frequency
	Channel **24** – freely selectable frequency

Each of the channels in the frequency banks "1" to "20" has been factory-preset to a fixed frequency (frequency preset).

The factory-preset frequencies within one frequency bank are intermodulation-free. These frequencies cannot be changed.

For an overview of the frequency presets, please refer to the supplied frequency information sheet. Updated versions of the frequency information sheet can be downloaded from the EM 300 G3 product page on our website at www.sennheiser.com.

The frequency banks "U1" to "U6" allow you to freely select and store frequencies. It might be that these frequencies are not intermodulation-free (see page 46).
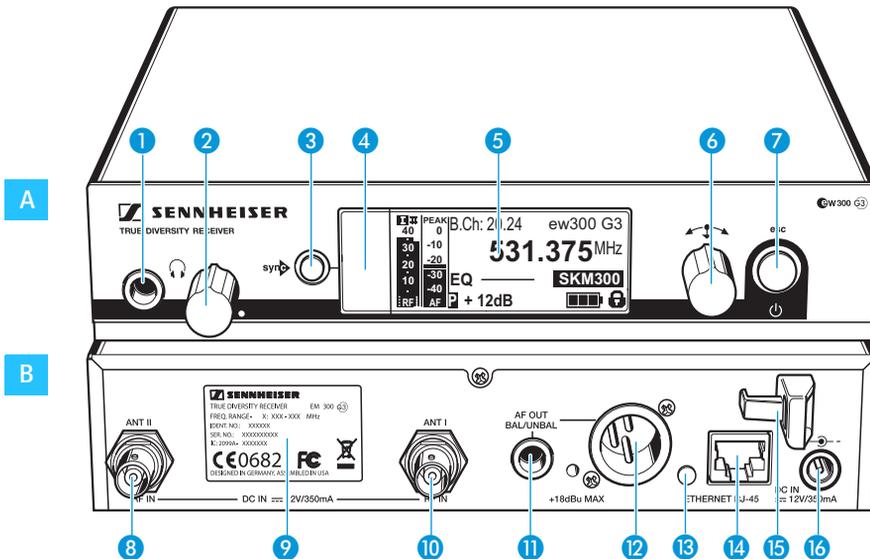

Delivery includes

The packaging contains the following items:

1 EM 300 G3 rack-mount receiver

1 NT 2-3 mains unit with one country adapter

2 rod antennas

1 GA 3 rack adapter

1 instruction manual

1 frequency information sheet

4 device feet

Product overview

Overview of the EM 300 G3 receiver

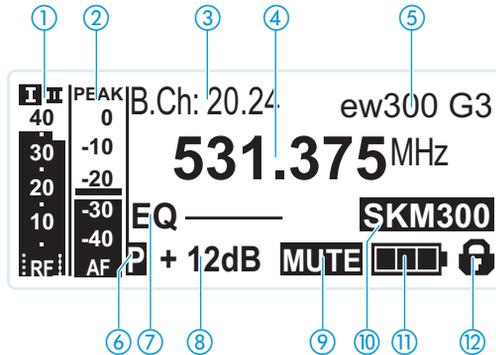

A Operating elements – front panel

❶ Headphone output,

Overview of the displays

After switch-on, the receiver displays the standard display "Receiver Parameters". For further illustrations and examples of the different standard displays, please refer to page 25. This standard display displays the operating states of the receiver and provides the most important information on the received transmitter – provided the transmitter supports this function.

Display	Transmitter/ receiver	Meaning
① RF level "RF" (Radio Frequency)	Receiver	Diversity display: ⓘ Antenna input I is active ⓘ Antenna input II is active RF signal level: Field strength of the received signal Squelch threshold level
② Audio level "AF" (Audio Frequency, see page 36)	Transmitter	Modulation of the transmitter with peak hold function When the display for audio level shows full deflection, the audio level is excessively high. When the transmitter is overmodulated frequently or for extended periods of time, the "PEAK" display is shown inverted.
③ Frequency bank and channel (see page 35)	Receiver	Current frequency bank and channel number

Display	Transmitter/ receiver	Meaning
④ Frequency (see page 35)	Receiver	Current receiving frequency
⑤ Name (see page 36)	Receiver	Freely selectable name of the receiver
⑥ Pilot tone "P" (see page 40)	Receiver	Activated pilot tone evaluation
⑦ Equalizer setting (see page 37)	Receiver	Current equalizer setting
⑧ Output gain (see page 36)	Receiver	Current output gain of the audio signal available at the ¼" (6.3 mm) jack socket ⑪ / XLR-3M socket ⑫
⑨ Muting function "MUTE" (see page 24)	Receiver/ transmitter	Audio signal is muted (see also page 50)
⑩ Transmitter type	Transmitter	Product name of the linked ew G3 transmitter The product name is displayed only if the transmitter supports this function.
⑪ Battery status	Transmitter	Charge status: approx. 100% · approx. 70% · approx. 30% · battery icon is flashing; charge status is critical · When the charge status is critical, "Low Battery" appears on the standard display.
⑫ Lock mode icon (see page 37)	Receiver	Lock mode is activated

11

Putting the receiver into operation

Preparing the receiver for use

> **Recommendations for optimum reception**
>
> To ensure optimum reception even under difficult conditions, we recommend connecting remote antennas and, if necessary, using antenna splitters (see "Accessories and spare parts" on page 52).
>
> When rack-mounting the receiver, you can mount the supplied antennas to the front of the rack by using an antenna front mount kit. When mounting more than one receiver into a rack, you should use remote antennas.

If you want to mount the receiver into a 19" rack:

▶ Read the corresponding chapter on page 14.

If you want to set up the receiver on a flat surface:

▶ Read the next chapter.

Setting up the receiver on a flat surface

CAUTION! **Risk of staining of furniture surfaces!**

Some furniture surfaces have been treated with varnish, polish or synthetics which might cause stains when they come into contact with other synthetics. Despite a thorough testing of the synthetics used by us, we cannot rule out the possibility of staining.

▶ Do not place the receiver on delicate surfaces.

**Mounting the rack mount "ears"**

> The rack mount "ears" are designed to help protect the operating elements from damage or deformation, e.g. if the receiver is dropped. Therefore, fasten the rack mount "ears", even if you do not want to rack mount your receiver.

To fasten the rack mount "ears" ⑳:

▶ Unscrew and remove the two recessed head screws (M4x8) on each side of the receiver (see left-hand diagram).

▶ Secure the rack mount ''ears'' ⑳ to the sides of the receiver using the previously removed recessed head screws (see right-hand diagram).
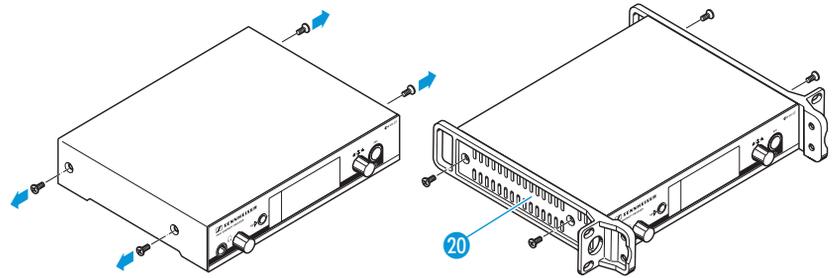

Fitting the device feet

ℹ️ Do not fit the device feet when mounting the receiver into a 19'' rack.

▶ Clean the base of the receiver where you want to fix the device feet.

▶ Fit the device feet to the four corners of the receiver as shown.

▶ Place the receiver on a flat, horizontal surface.

Connecting the rod antennas

The supplied rod antennas ⑰ can be mounted quickly and easily and are suitable for all applications where – good reception conditions provided – a wireless transmission system is to be used without a large amount of installation work.

▶ Connect the two rod antennas ⑰ to the BNC sockets ⑧ and ⑩ at the rear of the receiver.

▶ Align the rod antennas upwards in a V-shape.

ℹ️ When using more than one receiver, we recommend connecting remote antennas and, if necessary, using Sennheiser antenna accessories. Fore more information, visit the ew G3 product page at www.sennheiser.com.

Mounting the receiver into a 19″ rack

|	Do not fit the device feet when mounting the receiver into a 19″ rack.

CAUTION!

Risks when rack mounting the receiver!

When installing the device in a closed or multi-rack assembly, please consider that, during operation, the ambient temperature, the mechanical loading and the electrical potentials will be different from those of devices which are not mounted into a rack.

▶ Make sure that the ambient temperature within the rack does not exceed the permissible temperature limit specified in the specifications (see page 54).

▶ Ensure sufficient ventilation; if necessary, provide additional ventilation.

▶ Make sure that the mechanical loading of the rack is even.

▶ When connecting to the power supply, observe the information indicated on the type plate. Avoid circuit overloading. If necessary, provide overcurrent protection.

▶ When rack mounting, please note that intrinsically harmless leakage currents of the individual mains units may accumulate, thereby exceeding the allowable limit value. As a remedy, ground the rack via an additional ground connection.

Rack mounting one receiver

▶ Secure the rack mount "ears" ⑳ of the supplied GA 3 rack adapter to the receiver as described on page 12.

▶ Secure the blanking plate ㉑ of the supplied GA 3 rack adapter to one of the rack mount "ears" ⑳ using two recessed head screws (M 6x10).
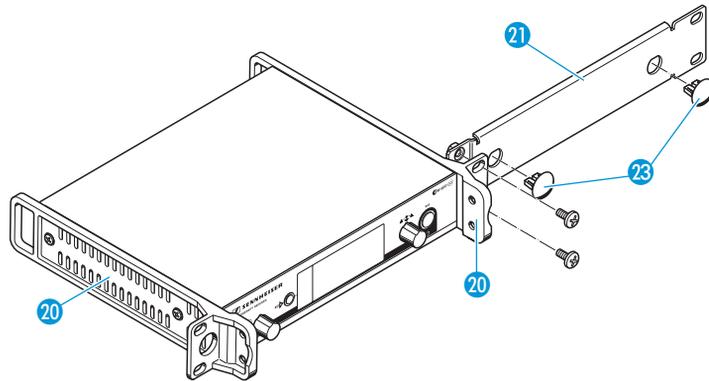

▶ Connect the antennas. You have the following options:

– You can connect the supplied rod antennas ⑰ to the rear of the receiver (see page 13). In this case, insert the two blanking plugs ㉓ into the holes of the blanking plate (see diagram above).

– You can use the AM 2 antenna front mount kit (see "Accessories and spare parts" on page 52) and mount the rod antennas to the blanking plate ㉑ (see diagram below).
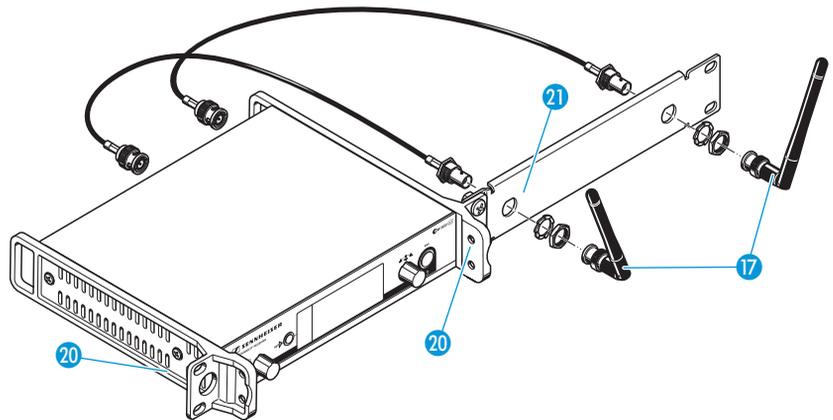

ℹ When using more than one receiver, we recommend connecting remote antennas and, if necessary, using Sennheiser antenna accessories. Fore more information, visit the ew G3 product page at www.sennheiser.com.

To mount the receiver into a 19″ rack:

▶ Slide the receiver with the mounted blanking plate ㉑ into the 19″ rack.

▶ Secure the rack mount ''ears'' ⑳ to the 19″ rack.

If you are using the supplied rod antennas:

▶ Align the antennas in a V-shape to obtain the best possible reception.

**Rack mounting two receivers**

ℹ When rack mounting two receivers side by side, you can only front mount the antennas when using the ASA 1 antenna splitter in conjunction with the AM 2 antenna front mount kit and an additional GA 3 rack adapter (see ''Accessories and spare parts'' on page 52).

We recommend using remote antennas.

To mount the receivers into a rack using the GA 3 rack adapter:

▶ Place the two receivers side by side upside-down onto a flat surface.

▶ Secure the jointing plate ㉒ to the receivers using six recessed head screws (M 3x6).

▶ Secure the rack mount ''ears'' ⑳ to the receivers as described on page 12.
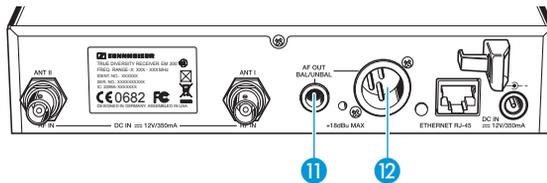

To mount the antennas:

▶ Use remote antennas, if necessary in conjunction with the ASA 1 antenna splitter (see ''Accessories and spare parts'' on page 52).

To mount the receivers into the rack:

▶ Slide the receivers into the 19'' rack.

▶ Secure the rack mount ''ears'' to the 19'' rack.

Connecting an amplifier/mixing console

The receiver's ¼'' (6.3 mm) jack socket ⑪ and XLR-3M socket ⑫ are connected in parallel, allowing you to simultaneously connect two devices (e.g. amplifier, mixing console) to the receiver.

▶ Use a suitable cable to connect the amplifier/mixing console to the ¼'' (6.3 mm) jack socket ⑪ or the XLR-3M socket ⑫.

For detailed information on balanced and unbalanced connection, please refer to the chapter ''Connector assignment'' on page 56.

Connecting receivers in a network

You can connect several receivers in a network. The receivers are remote controlled via a PC running the "Wireless Systems Manager" (WSM) software. This software will assist in the quick and safe configuration of multi-channel systems.

For further information on downloading the software, visit the ew G3 product page on our website at www.sennheiser.com.
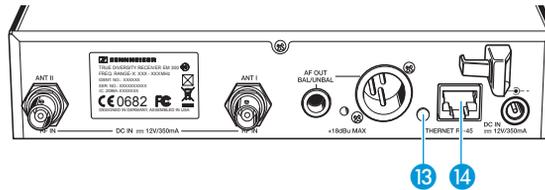

▶ Connect a standard network cable (at least Cat 5) to the LAN socket ⑭ of the receiver.

▶ Connect your receivers to an Ethernet switch.

▶ Additionally, connect a PC to the Ethernet switch as shown.

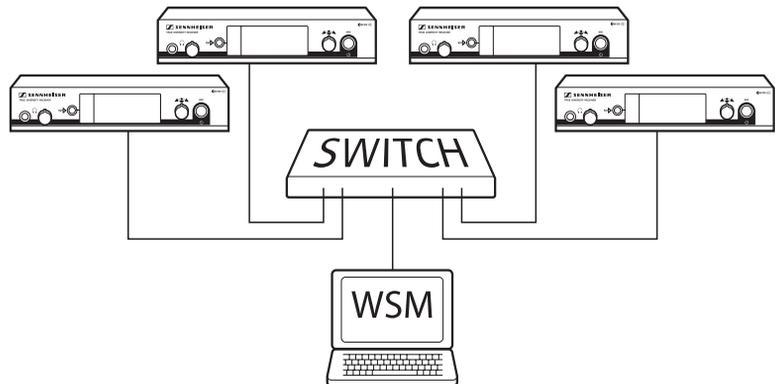

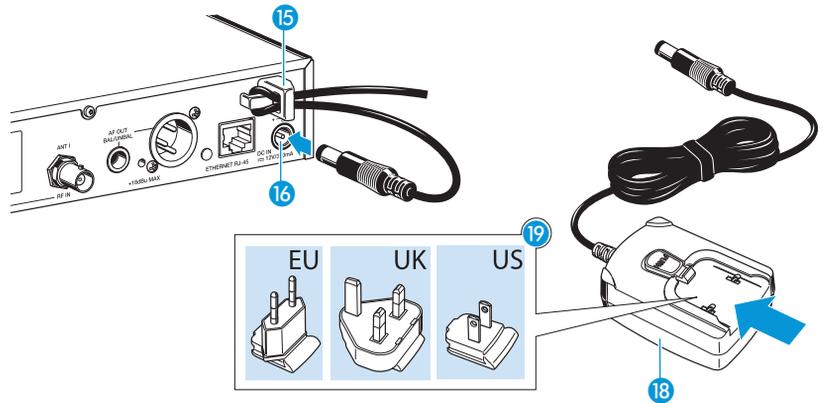

▶ Set up your multi-channel system as described on page 45.

The yellow LED ⑬ at the rear of the receiver indicates the network activity:

Yellow LED …	Connection status
… lit	Network cable connected to the Ethernet switch or PC
… off	No connection

Connecting the mains unit

Only use the supplied NT 2-3 mains unit. It is designed for your receiver and ensures safe operation.

To connect the NT 2-3 mains unit:

▶ Connect the yellow connector of the mains unit ⑱ to the yellow socket ⑯ at the rear of the receiver.

▶ Pass the cable of the mains unit through the cable grip ⑮.

▶ Slide the supplied country adapter ⑲ onto the mains unit ⑱.

▶ Plug the mains unit ⑱ into a wall socket.
  The STANDBY button ⑦ is backlit in red.
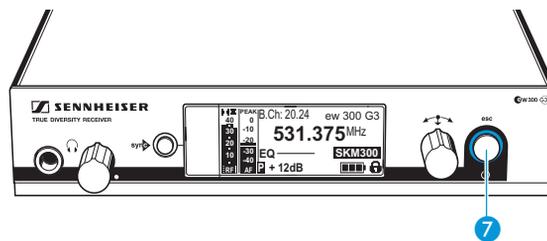

Using the receiver

To establish a transmission link, proceed as follows:

1. Switch the receiver on (see next section).

2. Switch the transmitter on (see the instruction manual of the transmitter).
   The transmission link is established and the display backlighting of the receiver changes from red to orange.

> ℹ️ It is vital to observe the notes on frequency selection on page 44.

If you cannot establish a transmission link between transmitter and receiver:

▶ Make sure that transmitter and receiver are set to the same frequency bank and to the same channel.

▶ Read the chapter ''Synchronizing transmitters with receivers'' on page 44 and, if necessary, the chapter ''If a problem occurs …'' on page 50.

Switching the receiver on/off
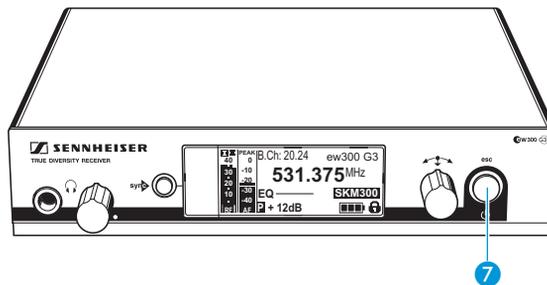

To switch the receiver on:

▶ Briefly press the STANDBY button ❼.
The receiver switches on and the ''Receiver Parameters'' standard display appears.

To switch the receiver to standby mode:

▶ Keep the STANDBY button **7** pressed until "OFF" appears on the display panel.
The receiver switches to standby mode.

When in the operating menu, pressing the STANDBY button **7** will cancel your entry (ESC function) and return you to the current standard display.

The STANDBY button **7** is backlit in red both during operation and in standby mode.

To completely switch the receiver off:

▶ Disconnect the receiver from the mains by unplugging the mains unit from the wall socket.
The backlighting of the STANDBY button **7** goes off.

Monitoring the audio signal via headphones

CAUTION! **Danger of hearing damage!**

Listening at high volume levels for long periods can lead to permanent hearing defects.

▶ Set the headphone volume control **2** to the minimum position before putting the headphones on.
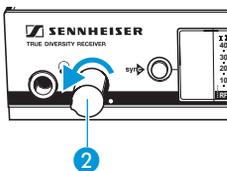

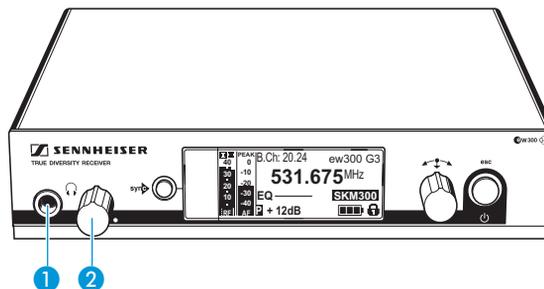

▶ Set the headphone volume control **2** to the minimum position.

▶ Connect headphones with a ¼" (6.3 mm) stereo jack plug to the headphone output 🎧 **1**.

▶ Gradually increase the volume and monitor the audio signal with the lowest possible volume.

sync▷ Synchronizing a transmitter with the receiver

You can synchronize a suitable transmitter of the ew 300 G3 series with the receiver. If the receiver is in ex works condition, the following parameters are transferred to the transmitter during synchronization:

Setting	Transferred parameters
"Frequency Preset"	Currently set frequency
"Name"	Freely selectable name currently set on the receiver
"Pilot Tone"	Current pilot tone setting of the receiver ("Inactive"/"Active")

> ℹ️ Via the "Sync Settings" submenu, you can adjust the parameters to be transferred to your transmitters (see page 39). It is vital to observe the notes on frequency selection on page 44.

To transfer the parameters:

▶ Switch the transmitter and the receiver on.
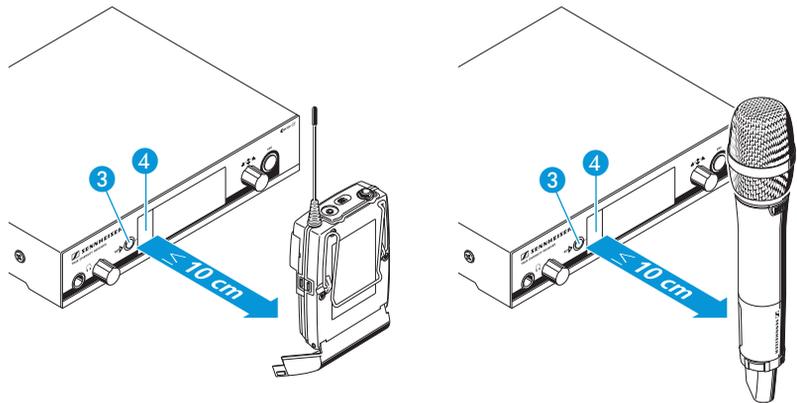

▶ Press the sync▷ button ❸ on the receiver.
"Sync" appears on the display panel of the receiver.

▶ Place the infra-red interface of the transmitter (see the instruction manual of the transmitter) in front of the infra-red interface ❹ of the receiver.
The parameters are transferred to the transmitter. When the transfer is completed, "√" appears on the receiver's display panel. The receiver then switches back to the current standard display.

To cancel the transfer:

▶ Press the STANDBY button **7** on the receiver.
"**Ⅹ**" appears on the display panel of the receiver. "**Ⅹ**" also appears if no suitable transmitter was found.

Deactivating the lock mode temporarily

You can activate or deactivate the automatic lock mode via the "Auto Lock" menu item (see page 37).

If the lock mode is activated, you have to temporarily deactivate it In order to be able to operate the receiver:

▶ Press the jog dial.
"Locked" appears on the display panel.

▶ Turn the jog dial.
"Unlock?" appears on the display panel.

▶ Press the jog dial.
The lock mode is temporarily deactivated:

When you are in the operating menu
The lock mode remains deactivated until you exit the operating menu.

When one of the standard displays is shown
The lock mode is automatically activated after 10 seconds.

The lock mode icon ⑫ flashes prior to the lock mode being activated again.

⑫

Muting the audio signal

To mute the audio signal:

▶ When one of the standard displays is shown on the display panel, press the STANDBY button.
"RX Mute On?" appears on the display panel.

▶ Press the jog dial.
The audio signal is muted. "RX Mute" flashes in alternation with the current standard display. The display panel is backlit in red.

To unmute the audio signal:

▶ Press the STANDBY button.
"RX Mute Off?" appears on the display panel.

▶ Press the jog dial.
The muting is canceled and the display backlighting changes from red to orange again.

If "RX Mute On?" or "RX Mute Off?" appears on the display panel but you do not wish to change the status of the muting function:

▶ Press the STANDBY button.
The status of the muting function remains unchanged and the current standard display appears.

Selecting a standard display

6
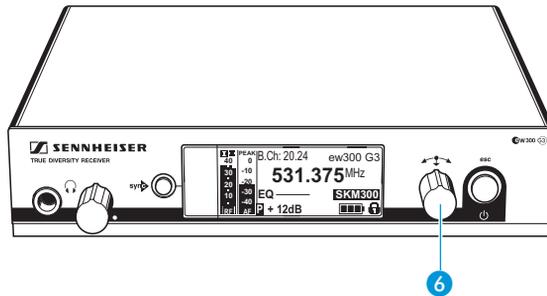

▶ Turn the jog dial to select the standard display:

Contents of the display	Selectable standard display
	"Transmitter Parameters"* (transmitter type/microphone, inverted display) displays the microphone head (SKM only) and the transmitter type
	"Receiver Parameters" appears after switch-on of the receiver and displays the receiver parameters (see page 10)
	"Soundcheck" (display with additional function) displays the signal quality within the transmission area (see page 31)

* The reading of the transmitter parameters can take up to 2 minutes. If you synchronize your transmitter with the receiver (see page 22), the parameters are read out without delay.

Using the operating menu

A special feature of the Sennheiser ew G3 series is the consistent, intuitive menu structure of transmitters and receivers. As a result, adjustments to the settings can be made quickly – even in stressful situations, for example on stage or during a live show or presentation.

The buttons

Button	Function of the button
Press the STANDBY button	• Switches the receiver on and off • Cancels the entry and returns to the current standard display (ESC function) • Mutes the receiver (special function, see page 24)
Press the jog dial	• Changes from the current standard display to the operating menu • Calls up a menu item • Enters a submenu • Stores the settings and returns to the operating menu
Turn the jog dial	• Selects a standard display (see page 25) • Changes to the next/previous menu item • Changes the setting of a menu item

Working with the operating menu

| ℹ️ | If the lock mode is activated, you have to deactivate it In order to be able to work with the operating menu (see page 23). |

By way of example of the ''Frequency Preset'' menu item, this section describes how to use the operating menu.

Changing from a standard display to the operating menu

▶ Press the jog dial.
The current standard display is replaced by the main menu.
The last selected menu item is displayed.

Menu

Squelch
Easy Setup
Frequency Preset
Name
AF Out
Equalizer
Auto Lock
Advanced
Exit

Selecting a menu item

▶ Turn the jog dial to change to the ''Frequency Preset'' menu item.
The current setting of the menu item is displayed:

Changing and storing settings

Call up ''Frequency Preset''

Select the frequency bank and confirm

Select the channel; store the setting

''Stored''

▶ Turn the jog dial to call up the menu item.

▶ Turn the jog dial to set the frequency bank.

▶ Press the jog dial to confirm your selection.

▶ Turn the jog dial to set the channel.

▶ Press the jog dial to store the setting.

Canceling an entry

▶ Press the STANDBY button to cancel an entry.
The current standard display appears on the display panel.

To subsequently return to the last edited menu item:

▶ Press the STANDBY button to cancel an entry.
The current standard display appears on the display panel.

Exiting a menu item

Exit

▶ Change to the "Exit" menu item.

▶ Confirm your selection.
You return to the next higher menu level.

To directly return to the current standard display:

▶ Press the STANDBY button.

Adjustment tips and functions

The operating menu allows you to make settings for your receiver and your transmitters. The ''Soundcheck'' standard display provides an additional function and can be called up by turning the jog dial, without having to get into the operating menu.

Doing a soundcheck

By doing a soundcheck, you can check the reception area for field strength gaps (''dropouts'') which cannot be compensated for by the receiver's diversity circuitry.

> ℹ️ The ''Soundcheck'' standard display must not be activated until later because otherwise the recording will give wrong results.

▶ If necessary, change from the ''Soundcheck'' standard display to one of the other standard displays of your receiver.

''Soundcheck''
standard display

Select any other
standard display
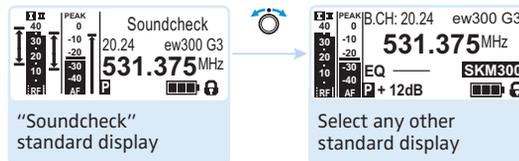

▶ Position the transmitter in the area in which it is to be used and switch it on.

▶ Leave the transmitter switched on and go to your receiver.

▶ On the receiver, change to the ''Soundcheck'' standard display.

''Receiver Parameters''
standard display

''Soundcheck''
standard display
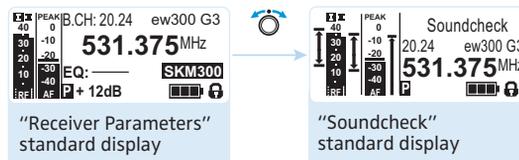

> ℹ️ If no transmitter is being received or if the signal is below the squelch threshold level, ''MUTE'' appears on the display panel (see ''If a problem occurs ...'' on page 50).

▶ Go to your transmitter.

▶ With the transmitter, walk up and down the area in which it is to be used.

▶ Then leave the transmitter there and do not switch it off.

During the soundcheck, the receiver records the RF level and the AF level. The recording result is displayed on the "Soundcheck" standard display:

RF Max   AF Max

RF Min

Display	Meaning	What to do …
RF Min	Min. RF signal level: must be well above the squelch threshold level for one of the two antennas	▶ Check if the antennas and the antenna cables are correctly connected. ▶ Improve the position of the antennas. ▶ If necessary, use antenna boosters.
RF Max	Max. RF signal level: both antennas should reach 40 dBμV	
AF Max	Max. audio level	▶ On your transmitter, adjust the audio level as high as possible without the level display for audio level showing full deflection (AF Max is at a level with the PEAK display). For more information, refer to the instruction manual of the transmitter.

If only one or none of the diversity displays is displayed during the sound check:

▶ Check if the antennas are properly positioned or check the antenna cables.

ℹ️ Both diversity displays can only be displayed on the ''Soundcheck'' standard display. During normal operation of the receiver, only one of the diversity displays is displayed.

- Equalizer
- Auto Lock
- Advanced
- Exit

Call up ''Squelch''   Select the desired setting   Store the setting

''Stored''

Adjustment range: 5 to 25 dBμV, adjustable in 2-dB steps, can be switched off

The squelch eliminates annoying noise when the transmitter is switched off. It also suppresses sudden noise when there is no longer sufficient transmitter power received by the receiver.

▶ Adjust the squelch threshold – with the transmitter switched off – to the lowest possible setting that suppresses hissing noise.

ℹ️ If you adjust the squelch threshold to a high value, the transmission range will be reduced under adverse RF reception conditions.

CAUTION!

⚠️

Danger of hearing damage and material damage!

If you switch the squelch off or adjust the squelch threshold to a very low value, loud hissing noise can occur in the receiver. The hissing noise can be loud enough to cause hearing damage or overload the loudspeakers of your system!

▶ Always make sure that the squelch is switched on (see below).

▶ Before adjusting the squelch threshold, set the volume of the headphone output (see page 21) and the audio output level (''AF Out'', see page 36) to the minimum.

▶ Never change the squelch threshold during a live transmission.

The squelch should only be switched off for servicing purposes. With the squelch threshold set to ''5 dB'', you switch the squelch off by turning the jog dial to the left and keeping it in this position for 3 seconds.

Display	Squelch is ...
	... switched on The dotted line displays the squelch threshold.
	... switched off. The dotted line goes off and the audio level display ''AF'' shows full deflection (hissing noise).

If you have accidentally switched off the squelch:

▶ Turn the jog dial to the right to switch the squelch on.

Scanning for, releasing and selecting frequency presets

Menu item	Function of the menu item
Scan New List	Automatically scans for unused receiving frequencies (frequency preset scan). If receiving frequencies are used, they will be locked; if receiving frequencies are unused, they will be released. After the frequency preset scan, you can select an unused frequency preset.
Reset List	Releases all locked frequency presets
Current List	Selects an unused frequency preset

If you call up the ''Scan New List'' menu item, your receiver scans for unused frequency presets. After the scan, the receiver displays a list of the frequency banks and their unused channels. The frequency bank with the largest number of unused channels is automatically selected.

To perform a frequency preset scan:

Call up "Easy Setup"	Call up "Scan New List"	The frequency preset scan is performed

Select and call up a frequency bank	Set the channel; store the setting	"Easy Setup" menu item

> **i** You can call up the list containing the frequency banks again by selecting the "Current List" menu item.

Selecting the frequency bank and the channel

|		
Call up "Frequency Preset"	Select the frequency bank and confirm	Select the channel; store the setting
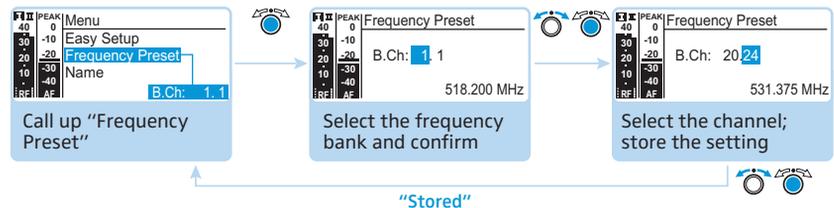

> **i** When setting up multi-channel systems, please observe the following:
>
> Only the factory-preset frequencies within one frequency bank ("1" to "20") are intermodulation-free. It is vital to observe the notes on frequency selection on page 44.

Overview of the frequency banks and channels:

Frequency bank	Channels	Type
"1" to "20"	up to 24 per frequency bank	System bank: frequencies are factory-preset
"U1" to "U6"	up to 24 per frequency bank	User bank: frequencies are freely selectable

Entering a name

| Call up "Name" | Enter a character and confirm | Enter a character; store the setting |

"Stored"

Via the "Name" menu item, you can enter a freely selectable name (e.g. the name of the performer) for the receiver.

The name is displayed on the "Receiver Parameters" standard display and can consist of up to eight characters such as:

- letters (without pronounciation marks),
- numbers from 0 to 9,
- special characters and spaces.

To enter a name, proceed as follows:

▶ Turn the jog dial to select a character.

▶ Press the jog dial to change to the next segment/character or to store the complete entry.

Adjusting the audio output level

Adjustment range: −24 dB to +24 dB, adjustable in 3-dB steps

Via the "AF Out" menu item, you can adjust the level of the audio output AF OUT from the receiver to the input of the connected device. The following figures are a guide to the best settings:

Connected device	Guide values for "AF Out"
Line	0 to +18 dB (+24 dB)
Microphone	−24 dB to −6 dB

Gain values greater than +18 dB should only be used when the audio modulation from the transmitter is at a low level, otherwise the audio output of the receiver may become clipped and distorted.

To adjust a gain greater than +18 dB (gain reserve):

▶ Adjust a level of +18 dB.

▶ Turn the jog dial to the right and hold it in this position for 3 seconds. The next higher value (+21 dB) appears. The audio output level is increased. Using this gain reserve also increases the headphone output level.

Setting the receiving frequencies and the frequency banks "U1" to "U6

When you have selected one of the system banks and then select the "Tune" menu item, the receiver automatically switches to channel 1 of the frequency bank "U1". In this case, "U1.1" briefly appears on the display panel.

Upon delivery, the channels of the frequency banks "U1" to "U6" are not assigned a receiving frequency.

Via the "Tune" menu item, you can set a receiving frequency to be stored in the current channel or you can select a different channel in one of the frequency banks "U1" to "U6" and assign this channel a receiving frequency.

It is vital to observe the notes on frequency selection on page 44.

Setting a receiving frequency for the current channel

▶ Turn the jog dial until the "Tune" menu item appears.

▶ Press the jog dial.
The frequency selection appears.

| Call up "Tune" | Select the MHz value and confirm | Select the kHz value; store the setting |

"Stored"

▶ Set the desired frequency.

▶ Press the jog dial.
Your settings are stored.
You are back to the operating menu.

Setting a frequency bank and a channel and assigning this channel a receiving frequency

▶ Turn the jog dial until the "Tune" menu item appears.

▶ Press the jog dial and keep it pressed until the frequency bank selection appears.

Call up "Tune" (special function)	Set the frequency bank and the channel	Set the frequency bank and the channel

Activating/deactivating the pilot tone evaluation

The pilot tone supports the receiver's squelch function and protects against interference due to RF signals from other devices.

The transmitter adds an inaudible signal, known as the pilot tone, to the transmitted signal. The receiver detects and evaluates the pilot tone.

Receiver display	Meaning
⑥	The pilot tone evaluation ⑥ is deactivated.
⑥	The pilot tone evaluation ⑥ is activated.
⑥	The pilot tone evaluation ⑥ is activated and the receiver receives a pilot tone from a transmitter.

Devices of the ew 300 G1 series (generation 1) do not support the pilot tone function. Therefore, please observe the following when combining a radio microphone or receiver of the ew 300 G3 series (generation 3) with devices from an earlier evolution wireless generation:

Transmitter	Receiver	Make sure to …
ew G3/ew G2	ew G3/ew G2	… activate the pilot tone function on both transmitter and receiver.
ew G3	ew G1	… deactivate the pilot tone function on the ew 300 G3 transmitter.
ew G1	ew G3	… deactivate the pilot tone function on the ew 300 G3 receiver.

Synchronizing transmitters with receivers

When synchronizing a transmitter with a receiver, please observe the following:

> ▶ Only use a transmitter and a receiver from the same frequency range (see the type plate on the transmitter and the receiver).
>
> ▶ Make sure that the desired frequencies are listed in the enclosed frequency information sheet.
>
> ▶ Make sure that the desired frequencies are approved and legal in your country and, if necessary, apply for an operating license.

Synchronizing a transmitter with the receiver – individual operation

Upon delivery, transmitter and receiver are synchronized with each other.

If, however, you cannot establish a transmission link between transmitter and receiver, you have to synchronize the channels of the devices:

▶ With the receiver, perform a frequency preset scan to scan the frequency banks for unused channels ("Scan New List", see page 34). Then "Sync" appears on the display panel of the receiver.

▶ Synchronize a transmitter with the receiver via the infra-red interface (see page 22).
This establishes a transmission link between the transmitter and the receiver.

Alternatively, you can set the channel on the transmitter manually:

▶ Make sure that you set the transmitter to the same frequency bank and the same channel as the receiver (see the instruction manual of the transmitter).

Synchronizing transmitters with receivers – multi-channel operation

> ℹ️ In order to ensure an intermodulation-free transmission, use the same frequency bank for all transmission links.

Network operation

Combined with ew 300 G3 transmitters, ew 300 G3 receivers can form transmission links that can be used in multi-channel systems.

In multi-channel operation, the receivers are remote controlled via a PC running the "Wireless Systems Manager" (WSM) software.

For further information on downloading the software, visit the ew G3 product page on our website at www.sennheiser.com.
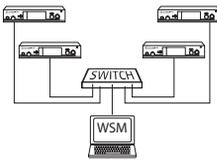

> ℹ️ Advantages of controlling the receivers via the "Wireless Systems Manager" (WSM) software:
> • Detailed overview of all receiving channels
> • Remote control of all receivers in the network
> • Combination of receivers of different frequency ranges (see page 6).

▶ Connect the receivers in a network (see page 18).

▶ Launch the "Wireless Systems Manager" (WSM) software.

▶ To scan for unused receiving frequencies and to configure the receivers, proceed as described in the instruction manual of the "Wireless Systems Manager" (WSM) software.

▶ Set the corresponding transmitter to the selected frequency bank and to the selected channel either by synchronizing the transmitter with the receiver (see page 22) or by setting the frequency bank and the channel manually (see the instruction manual of the transmitter).
Your multi-channel system is now set up.

Operation without network

If you want to set up a multi-channel system without using the WSM, proceed as follows:

▶ Switch off all transmitters of your system that are to be automatically configured.
Channels used by switched-on transmitters are displayed as "used".

▶ With one of the receivers, perform a frequency preset scan to scan the frequency banks for unused channels ("Scan New List", see page 34). Then "Sync" appears on the display panel of the receiver.

▶ Switch one of the transmitters on.

▶ Synchronize this transmitter with the receiver via the infra-red interface (see page 22).
This establishes a transmission link between the transmitter and the receiver.

▶ Repeat for the remaining transmitter and receiver pairs as described above. Leave those transmitters switched on that are already linked to a receiver.
Your multi-channel system is now set up.

Alternatively, you can set the channel on the transmitter manually:

▶ Make sure that you set the transmitter to the same frequency bank and the same channel as the receiver.
For information on the setting options of the transmitter, refer to the instruction manual of the transmitter.

You can also freely select the receiving frequencies and store these frequencies in the frequency banks "U1" to "U6".

> If you are using frequencies from the frequency banks "U1" to "U6", it might be that the receiving frequencies are not inter-modulation-free.
>
> To ensure that the desired frequencies are intermodulation-free:
>
> ▶ Contact your Sennheiser partner (see www.sennheiser.com).

If you want to use the frequency banks "U1" to "U6":

▶ Make sure to use receivers from the same frequency range (see page 6 and the type plates of the devices).

▶ Only use frequencies that are approved and legal in your country.

▶ Set each receiver to the same frequency bank (see page 38).

▶ On one of the receivers, select a channel within this frequency bank (see page 38).

▶ Assign this channel one of the receiving frequencies (see page 38).

▶ Synchronize a transmitter with the receiver (see page 22).

OR

▶ Manually set the transmitter to the same frequency bank, channel and frequency that you set on the receiver.

▶ Repeat for the remaining transmitters and receivers as described above.

Cleaning the receiver

CAUTION!	**Liquids can damage the electronics of the receiver!**
	Liquids entering the housing of the receiver can cause a short-circuit and damage the electronics.
	▶ Keep all liquids away from the receiver.

▶ Before cleaning, disconnect the receiver from the mains.

▶ Use a cloth to clean the receiver from time to time. Do not use any solvents or cleansing agents.

Recommendations and tips

… for optimum reception

- Transmission range depends to a large extent on location and can vary from about 10 m to about 150 m. There should be a "free line of sight" between transmitting and receiving antennas.

- If, with the EM 300 G3 receiver, reception conditions are unfavourable, you should use two remote antennas which are connected via antenna cable.

- To avoid overloading the receiver, observe a minimum distance of 5 m between transmitting and receiving antennas.

- Observe a minimum distance of 50 cm between receiving antennas and metal objects (such as cross members or reinforced-concrete walls). Align the antennas upwards in a V-shape.

… for multi-channel operation

- Each of the frequency banks "1" to "20" accommodates factory-preset receiving frequencies which are intermodulation-free. For possible frequency combinations, please refer to the supplied frequency information sheet.

- The channels in the frequency banks "U1" to "U6" can be assigned freely selectable frequencies (see page 38).

- When using several transmitters simultaneously, interference can be avoided by maintaining a minimum distance of 20 cm between two transmitters.

- Use accessories recommended by Sennheiser for multi-channel applications (see page 52).

If a problem occurs …

Problem	Possible cause	Possible solution
Receiver cannot be operated, "Locked" appears on the display panel	Lock mode is activated	Deactivate the lock mode (see page 23).
No operation indication	No mains connection	Check the connections of the mains unit.
No RF signal	Transmitter and receiver are not on the same channel	Set the transmitter and receiver to the same channel. To do so, use the synchronization function (see page 22).
	Transmission range is exceeded	Check the squelch threshold setting (see page 38).
		Reduce the distance between transmitter and receiving antennas.
RF signal available, no audio signal, "MUTE" appears on the display panel	If "RX Mute" additionally appears on the display panel: receiver is muted	Cancel the muting on the receiver (see page 24).
	If "TX Mute" additionally appears on the display panel: transmitter is muted or doesn't transmit a pilot tone	Cancel the muting on the transmitter (see the instruction manual of the transmitter).
		Activate the pilot tone transmission on the transmitter (see the instruction manual of the transmitter).
		Deactivate the pilot tone evaluation on the receiver (see page 40).
	Receiver's squelch threshold is adjusted too high	Reduce the squelch threshold (see page 33).
		Reposition the antennas.
Audio signal has a high level of background noise	Transmitter sensitivity is adjusted too low	Adjust the transmitter sensitivity correctly (see the instruction manual of the transmitter).

Problem	Possible cause	Possible solution
Audio signal is distorted	Transmitter sensitivity is adjusted too high	Adjust the transmitter sensitivity correctly (see the instruction manual of the transmitter).
	Receiver's audio output level is adjusted too high	Reduce the audio output level (see page 36).
No access to a certain channel	During scanning, an RF signal has been detected on this channel and the channel has been locked	Set the transmitter operating on this channel to a different channel and redo the frequency preset scan (see page 34).
	During scanning, a transmitter of your system operating on this channel has not been switched off	Switch the transmitter off and redo the frequency preset scan (see page 34).
During the sound-check, only one diversity display (I or II) appears on the display panel	One of the antennas is not correctly connected	Check the antenna cable or the antenna.
	Antennas are not optimally positioned	Reposition the antennas.
None of the diver-sity displays I or II appears on the display panel	Receiver's squelch threshold is adjusted too high	Reduce the squelch threshold (see page 33).
	Transmitter's RF signal is too weak	Increase the transmission power of the transmitter.
		Reduce the distance between transmitter and receiver.

If a problem occurs that is not listed in the above table or if the problem cannot be solved with the proposed solutions, please contact your local Sennheiser partner for assistance.

To find a Sennheiser partner in your country, search at www.sennheiser.com under ''Service & Support''.

Accessories and spare parts

The following accessories are available from your specialist dealer:

Cat. No.	Product name and description
503167	GA 3 rack adapter
