

Mini DVDR DL Media

Store nearly an hour of continuous video recording with your digital camcorder!

Up until recently the most common mini recordable DVDs available were 1.4GB DVD-R's and DVD-RW's; both of which hold ~30 minutes of camcorder footage. Samsung now offers 6 camcorder models and Sony offers 7 which support Mini DVD+R DL media. While Canon and Panasonic both offer 5 camcorder models supporting Mini DVD-R DL media. These newer media formats can capture nearly an hour's worth of video camcorder footage. No need to flip the disc during recording, which is required when using double-sided Mini DVD media.

Like the full size 12cm DVDR DL discs, these discs are fully compatible with the DVD+R DL and DVD-R DL standards and should be compatible with almost any DVD drive which can play full size DVDR DL discs, including many standalone DVD players. While existing +R and -R DL compatible DVD writers can write to this media, at this time no hardware upgrades are available to convert current camcorders to support this new format (mini DVD+/-R DL media).

For added protection against the scratches and abrasion that can occur during normal camcorder and home use, Verbatim Mini DVDR DL media features our innovative VideoGard™ technology. Specifically developed for video recording and playback, Verbatim VideoGard™ has a protective disc coating applied to the recording surface safeguarding the disc from everyday handling...fingerprints, smudges & scratches. VideoGard™ Protection is 40 times more scratch resistant than a standard DVD. Safeguard your precious memories

Verbatim has been at the forefront in developing technologies and manufacturing processes that ensure reliability and durability at today's higher speeds.

Verbatim 3Pk Mini DVD+R DL and DVD-R DL discs are now available and in stock.

Part #	Description	Capacity
43631	DVD-R DL 8cm Hardcoat 5pk 4x	2.6GB / 55min
